

## **SaaS Certificate Authority for Intune**

# What is EasySCEP

- Azure-based SaaS Certificate Authority built for Intune
- Simple solution for deploying client certificates using Intune
- Issues client certificates based on SCEP protocol
- Issues ad-hoc server certificates
- Fully managed SaaS solution

# Why to choose EasySCEP

- Cost free trial
- Simple price plans
- No hidden fees
- Easy to set up, easy to manage
- Customer driven development
- Built to simplify your IT infrastructure
- Improve your security with certificate based authentication

# Pre-requisites

All you need is to have Intune setup

# Setup guide

- 1) Go to configure for your purchased Easy SCEP SaaS marketplace
- 2) Configure basic properties like Certificate Authority name and IP whitelisting
- 3) Ensure you follow given instructions for allowing Easy SCEP to integrate with your Intune Setup
- 4) Go to Intune and create applicable policies:
  - 1) Create SCEP Certificate Authority Trust deployment profile - Certificate can be downloaded from configuration page.
  - 2) Create Device/User SCEP Certificate deployment profile(s)
  - 3) Create profile(s) for 802.1x / VPN using SCEP generated certificates
- 5) Configure your 802.1x / VPN to trust the SCEP Certificate Authority (E.g. using Radius)

# Who we are

Just Software is a Danish startup who are building collaboration with a client to provide the best client experience.

We are a company of enthusiastic developers who have huge experience in development for Azure Cloud and DevOps, setting up monitoring and providing highly professional consultancy on the infrastructure and software development.

We care about our clients and value your feedback. This is one of our drivers for high quality products. We provide transparent prices and easy-to-use products.
