

KAI KnowledgeAI

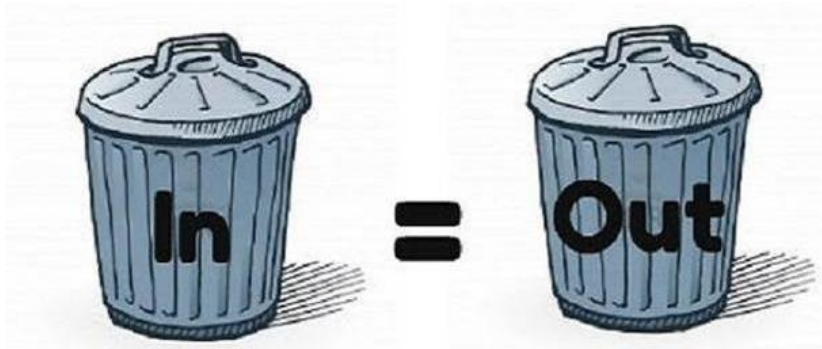

Transform your Data into Knowledge

KAI KnowledgeAI

Nowadays, enterprises face 2 major data problems:

- Phenomenal Quantity
- Random Quality

Bad Quality Data = Unreliable Results

- High-Volume Databases
- Multiple Formats
- Various content

=> Complex Data Exploitation

KAI KnowledgeAI

Exploit your knowledge, rapidly, with a high ROI.

KAI provides an **AI platform** to **automate** the **Knowledge Management** of your databases.

Indexing and instant
analysis of your
databases.

Instant diagnosis
of your database
knowledge.

KAI KnowledgeAI

KAI Audit

Control your Data

- Automated diagnosis of your knowledge with AI
- AI-assisted planning of actions to be taken on your data

KAI KnowledgeAI

How it works

Business Applications developed by the enterprise

KAI Solution: A Middleware that integrates into the enterprise's existing tools.

Connect your databases

servicenow

KAI KnowledgeAI

KAI's Neural Semantic Graph vs RAG

	KAI	RAG
DOCUMENT SPLITTING	Semantic division: division according to document creation logic = Semantic meaning intact	Basic, arbitrary chunking = Loss of meaning
DOCUMENT ANALYSIS	Automatic detection of concepts and themes Content vectorization Generated meta = Keeps semantic context	Basic vectorization Embedding = Loss of context
DOCUMENT INDEXING	Creation of semantic graph on concepts and themes = Creation of global semantic context	Pooling of raw vectors = No semantic links between documents
DOCUMENT CLEANING	Using semantic graph to detect contradictory documents with respect to themes and concepts	-
KNOWLEDGE MINING	Prompt factory + Semantic graph	-

KAI KnowledgeAI

File Parser

- Ability to extract document content as a human being does.
- Ability to read images, graphs, curves, diagrams, tables, etc... in any type of document: Excel, PDF, PPT, Word...
- Only audio and video formats are not currently supported (R&D in progress).
