

# Microsoft Security Platform Services

Kainos helps organisations implement, integrate, and operate Microsoft Security as a single, integrated security platform, improving visibility, control, and day-to-day security operations

## The Challenge

Organisations invest heavily in Microsoft Security but struggle to achieve **consistent, day-to-day security outcomes** due to disconnected tools and operations.

## Our Approach

### Lifecycle-based Microsoft Security Delivery:

- **Analyse** – Assess security posture across cloud, data, identity, and threats using Microsoft Security insights.
- **Design** – Define target Microsoft Security architecture, controls, and operating model.
- **Build & Integrate** – Configure and connect Microsoft Security services into a unified platform.
- **Operate** – Monitor, respond, tune and report.

## Our Solution

Advisory, integration, and managed services to **operationalise Microsoft Security** across core domains:

- Cloud security
- Identity and access management
- Data protection and governance
- Threat detection and response

Focused on configuration, integration, and ongoing operation to deliver real-world security outcomes

## Benefits/Outcomes

- Unified Microsoft Security operations
- Improved visibility and faster threat response
- Greater value from existing Microsoft Security investments

## Our Credentials

- Delivered by **Kainos Microsoft security specialists**
- Aligned to Microsoft-recommended best practices
- Deep expertise across **Defender, Sentinel, Purview, and Entra ID**
