

Governance in a box

Understand your organisation's current maturity across governance, ethics, trust, human-centred design, and integrity — aligned to Kainos' frameworks and global standards.

The Challenge

Companies aiming to leverage the advantages of AI frequently find it difficult to **navigate the ethical, legal, and operational hurdles associated with its implementation.**

It is essential for organisations to integrate AI governance early-on to ensure responsible use of AI and adherence to legal regulations. Failure to address these challenges can lead to **unmanaged AI risks as well as compliance and ethical breaches**, all of which have the potential to ultimately impact the organisation's **reputation and operational efficiency.**

Our Solution

Independent responsible AI maturity review benchmarked against latest standards and industry best practices.

Structured plan and recommendations to refine your governance approach that builds on your existing foundation and embeds into current practices.

Assurance on governance approach to help adopt AI responsibly and build trust -> accelerating AI adoption.

Benefits/Outcomes

Responsible AI maturity assessment.

Gap analysis & report.

Bespoke responsible AI strategy including framework to support AI work at an organisational and project level.

List of actions for a future roadmap.

Our Approach

- Review existing strategies, risk frameworks, assurance processes, and AI initiatives.
- Evaluate roles, accountability structures, current controls, training, and documentation quality.
- Map current practices to key standards (EU AI Act, NIST RMF, UK DSIT guidance, ISO 42001).
- Stakeholder engagement through 1:1 interviews or small group sessions.
- Assess readiness of teams and leadership with Responsible AI goals.
