Comprehensive ERP, CRM and App Solutions

- ERP
- CRM
- Mobile and custom development – all under one roof

Vendor Portal

Empower strategic sourcing and supplier relationship management with a unified, AI-powered portal that centralizes supplier data, streamlines workflows, and ensures compliance – built to simplify complex supply chain operations

Key Features

- Simplify the end to end Procure to Pay process
- Smart vendor on-boarding
- Multi company and multi currency supported
- Empower vendors with MyProcureBot, an AI powered agent

Industry Pain Points

- Manual vendor on-boarding and vetting process
- Compliance & audit challenges
- Vendor performance measurement and value demonstration
- Lack of centralized vendor information

Business Goals

- Streamline procurement operations
- Improve supplier collaboration
- Ensure compliance and transparency
- Integrate with existing ERP systems

Industry Specific Benefits

Mining and Quarrying	Public Sector	Steel Manufacturing & Distribution
Performance Scoring for Critical Equipment Suppliers	Transform vendor on-boarding from months to days	Centralize contract lifecycle and pricing governance with vendors
Higher asset uptime, fewer unplanned outages	Eliminate vendor silos and establish a unified vendor-master repository	Capture and trace all material documentation (MTCs, quality certificates)
Reduced non-compliance penalties and improved safety assurance across the supply chain	Embed compliance and risk-controls into your vendor-journey	Align inventory strategy with vendor lead-times, MOQ commitments and shipment alerts

AutoRecruit - eRecruitment Portal

AutoRecruit helps HR, Recruitment, and Talent Acquisition teams hire with clarity and confidence to streamlines sourcing, screening, scheduling, and evaluation while using intelligent features to match candidates, summaries interviews, and reduce manual work.

Key Features

- Centralized hiring workspace for HR, recruiters, and hiring managers
- Intelligent matching and shortlisting
- Customizable roles, permissions, and access levels
- Automated candidate sourcing and parsing across multiple channels

Industry Pain Points

- High Competition for Skilled Talent
- Inconsistent Shortlisting & Evaluation
- Time-Consuming Resume Screening
- Unclear Candidate Communication

Business Goals

- Automate recruitment and approval workflows
- Improve candidate quality and matching accuracy
- Strengthen transparency and team collaboration
- Improves quality-of-hire through structured, fair evaluation

Role-Specific Benefits

HR Teams	Recruiters & Talent Acquisition	Hiring Managers	Applicants
Less time spent manually sorting resumes	Faster creation of accurate job descriptions	Shortlists that make sense and match the role	A simple, friendly portal to apply and track their status
Clean, organized candidate records	Consistent evaluation across teams and regions	Clear insights and summaries after interviews	Timely updates and clear communication
Transparent audit trails and evaluation history	Stronger candidate pipelines through smart matching	Confident, well-supported hiring decisions	Fair evaluation through structured assessments and transparent steps

AutoAPX - AP Automation

Stay in control of vendor invoices with a streamlined process that captures, validates, and routes invoices with accuracy. AutoAPX keeps AP teams organized, reduces manual effort, and supports consistent processing, designed for industries where invoice volume, supplier coordination, and payment timing directly impact daily operations

Key Features

- Capture invoices from email, cloud storage, or direct upload
- Extracts header and line-item details from invoices in different formats
- Account mapping for vendor, company, and GL matching
- Direct posting of validated invoices to your finance system

Industry Pain Points

- Manual data entry slowing down AP operations
- Compliance & audit challenges
- High invoice volume during peak cycles
- PO and receipt matching for accurate validation

Business Goals

- Ensure accuracy through structured validation
- Standardize AP processes across multiple locations
- Reduce manual AP workload and processing cost
- Integrate with existing ERP systems

Industry Specific Benefits

 Steel Distribution	 Retail & Commerce
Improve accuracy of material-related invoices by validating grades, weights, quantities, and service charges before posting	Process large volumes of merchandise and logistics invoices quickly, even during seasonal peaks
Keep multi-yard operations aligned with consistent approval routing and controlled access across sites	Maintain clear invoice flows across stores, warehouses, and head office with automated routing and real-time status visibility
Support steady supply schedules by ensuring timely posting and payments to material suppliers, transporters, and processors	Prevent invoice delays that can affect product availability and replenishment; maintain reliable relationships with suppliers

KPoD – Proof of Delivery

A reliable delivery solution that captures detailed proof, provides real-time insight into each delivery, and helps teams complete every order with accuracy, consistency, and better operational control

Key Features

- Mobile driver app with photo, signature, and timestamp capture
- Offline delivery capture with automatic sync
- QR code scanning for quick order identification
- Admin portal for managing and monitoring deliveries

Industry Pain Points

- Manual POD processes leading to missing paperwork and delays
- Limited visibility into driver location and delivery status
- Operational inefficiencies caused by fragmented systems
- Delivery status not fully connected to ERP or order systems

Business Goals

- Improve delivery accuracy and accountability
- Reduce time spent on paperwork and administrative follow-ups
- Strengthen customer confidence with timely delivery updates
- Maintain reliable data flow into ERP and logistics systems

Industry Specific Benefits

 Distribution	 Logistics
Lowers compliance deductions and shortages with complete delivery evidence	Shortens claim resolution time with photo and geo-verified delivery records
Improves accuracy for store and wholesale deliveries through real-time updates	Enables line-level exception notes for access issues, customer refusals, or packaging concerns
Speeds end-of-day reconciliation by eliminating manual paperwork	Captures exceptions instantly, helping dispatch prevent route slow-downs

Customer Portal

Offer B2B customers a unified self-service portal for orders, invoices, payments, documents, and communication—reducing manual effort and improving visibility

Key Features

- Simplify the end-to-end order-to-pay process
- Real-time visibility into order status and shipment updates
- Customer self-onboarding with controlled access
- Support for multi-company and multi-currency operations

Industry Pain Points

- Delays from manual document and account summary sharing
- High operational workload for sales and support teams
- Difficulty tracking historical transactions, disputes, and payments
- Slow payment cycles caused by limited visibility into outstanding balances

Business Goals

- Streamline customer communication and reduce manual follow-ups
- Improve customer satisfaction through real-time visibility
- Improve customer satisfaction through real-time visibility
- Provide a single source of truth for customer interactions

Major Benefits

Job & Site-Based Order Control	Clear Delivery & Dispatch Visibility	Fewer Invoice & Ticket Disputes	Self-Service Documents for Customers
Orders, deliveries, and invoices are organized by job or site	Customers track load status, dispatch timing, and delivery confirmation	Customers verify invoices with delivery tickets, quantities, and charges before payment	Quotes, invoices, statements, and delivery tickets are available in one place
Simplifies tracking for contractors managing multiple jobs	Cuts delivery-status calls and last-minute coordination	Reduces billing issues and back-and-forth with billing team	Eliminates repeated document requests to sales and operations

Field Service

Improves on-site operations with clear job planning, skilled technician support, and AI tools that help detect issues early, guide inspections, and reduce rework across your field teams

Key Features

- Plan, assign, and track field jobs in real time
- Technician app for job details, checklists, photos, and notes
- Preventive maintenance scheduling for assets and equipment
- AI object detection to identify missing or unsafe items during inspections

Industry Pain Points

- Unclear job schedules causing delays and rework
- Field staff arrive on-site without needed instructions or history
- Hard to trace missing tools, equipment, or required materials
- Limited visibility into asset health without automated alerts

Business Goals

- Improve job planning accuracy and reduce avoidable delays
- Catch defects, hazards, and abnormal asset conditions early
- Speed reporting with AI summaries of notes, photos, and results
- Boost technician productivity with guided steps and fast history access

Industry Specific Benefits

 Construction & Interior Design	 Vegetation Management	 Renewable Energy
Identify defects early with AI-supported detection of cracks, alignment issues, and incomplete installations	Improve clearance reliability with AI detection of overgrowth and hazardous vegetation	Detect abnormal solar or turbine conditions early through AI-based photo and performance pattern alerts
Keep interior finishing and renovation tasks on schedule with accurate job planning and material readiness	Plan trimming and inspection routes efficiently, reducing travel time and rework for field crews	Maintain higher energy output with timely service scheduling and accurate job history for each component
Capture site photos, progress updates, and installation records to avoid rework and improve handover quality	Maintain equipment like chippers, chainsaws, and mowers through scheduled maintenance and usage tracking	Track inverters, panels, turbine parts, and tools to reduce delays and ensure smooth maintenance cycles

Employee Self Service App Suite

Centralized requests, structured workflows, and real-time tracking simplify employee operations, enhancing efficiency, experience, and management on a secure cloud platform

Key Features

- Suite of modular apps for employee self-service
- Automated request routing and approval workflows
- Real-time visibility into submission and approval status
- Simple, intuitive user experience for employees and managers

Industry Pain Points

- Manual request handling causes delays and increases workload
- Employees lack visibility into where their requests stand
- Teams spend excessive time on repetitive tasks
- Inconsistent workflows lead to errors and compliance gaps

Business Goals

- Standardize employee request and approval processes
- Reduce administrative overhead through automation
- Improve operational transparency and accountability
- Strengthen compliance with structured digital workflows

Role-Specific Benefits

HR & Admin Teams	Employees	Managers & Supervisors
Reduced manual workload	Easy submission of daily requests	Centralized approvals
Digitally organized requests	Clear status tracking and notifications	Better visibility into team activities
Consistent and reliable workflows	Secure access to information	Quicker decision-making with fewer bottlenecks

Purchase Requisition

A centralized and structured way for teams to request materials, equipment, and services. Designed for industries where timely purchasing keeps operations running smoothly

Key Features

- Quickly request equipment, materials, or services
- Multi-level approval workflows with clear status tracking
- Support for inventory and non-inventory items
- Multi-site and multi-department capabilities for distributed organizations

Industry Pain Points

- Delays in requesting and approving essential supplies
- Lack of standard process across sites, labs, or departments
- Limited visibility into what was requested, approved, or spent
- Difficulty tracking urgent, high-priority purchase needs

Business Goals

- Bring consistency to every purchase request
- Speed up approvals by removing manual steps
- Provide traceability for grant-funded and project-based purchases
- Give finance and department heads a clean record of all requests

Industry Specific Benefits

 Mining and Quarrying	 Higher Education	 Biotechnology
Faster approval of parts needed to keep loaders, crushers, and trucks running	Standardized process for labs, faculties, and administrative offices	Organized requisitions for reagents, pipettes, cell culture items, and scientific instruments
Track requisitions tied to maintenance schedules or safety requirements	Track requisitions for chemicals, lab kits, classroom materials, and IT needs	Clear approval pathways to avoid delays in research timelines
Clear visibility for procurement teams supporting multiple mine sites	Transparent documentation for grant-funded purchases and research projects	Track requests by experiment, research team, or study ID

Travel & Expense Report

Travel and expense processes become simpler with streamlined submissions, structured approvals, and real-time visibility—enabling faster reimbursements and better support for employees and finance teams

Key Features

- Intelligence & automation
- Policy & compliance controls
- Credit card & reconciliation
- Workflow & approvals
- Reporting & visibility

Industry Pain Points

- Policy violations occur due to inconsistent processes
- Multi-currency and tax handling adds complexity
- Reconciling credit card transactions is time-consuming
- Lack of visibility into travel approvals causes uncertainty

Business Goals

- Standardize travel & expense workflows
- Support global operations with multi-currency and tax automation
- Ensure accurate, audit-ready financial records
- Shorten reimbursement cycles

Role-Specific Benefits

Employees	Managers & Supervisors	Finance Teams
Faster and easier expense submissions	Centralized approval workspace	Reduced validation time with OCR and AI
AI-assisted entry reduces manual work	Immediate access to required details	Standardized, audit-ready data
Clear visibility into status and approvals	Automated policy enforcement	Simplified reconciliation and invoice generation

Employee Loan Management

Employee loan requests become easy to manage with guided submissions, structured approval workflows, and clear visibility into issued items or cash loans—supporting employees, managers, and payroll teams through a secure, user-friendly experience.

Key Features

- Submit cash or non-cash loan requests
- Route requests to one or multiple approvers
- Notifications & return tracking
- Set and manage grace periods for late returns

Industry Pain Points

- No clear visibility into loan status or due dates
- Approval delays due to inconsistent workflows
- Payroll teams struggle with accurate deduction tracking
- No automated reminders for due or overdue item returns

Business Goals

- Streamline and standardize the loan request process
- Reduce administrative handling and paperwork
- Improve visibility into loan issuance and return timelines
- Support payroll teams with clear transaction data

Role-Specific Benefits

Employees	Managers & Supervisors	Payroll & Finance Teams
Easy submission of loan requests	Centralized place to review and approve loan requests	Accurate extraction of loan transaction data
Clear updates on approval and return timelines	Clear overview of timelines and return expectations	Reliable repayment and deduction information
Automatic reminders for due or overdue returns	Reduced follow-up effort and manual coordination	Well-organized reporting for audits and planning

Key Features

- Multi-language & multi-site support
- Workforce & configuration
- Configure organizational structures and attendance settings
- Project & task tracking
- Customizable reports

Industry Pain Points

- Attendance settings are inconsistent across teams or sites
- Employees lack clarity on hours worked and leave balance
- Managers cannot easily monitor attendance across teams
- Leave approvals follow different processes across departments

Business Goals

- Standardize attendance and leave rules across the organization
- Support flexible organizational needs through configuration
- Provide a lightweight way to track tasks and project-related time
- Improve visibility into billable and non-billable effort

Role-Specific Benefits

Admin & HR	Managers & Supervisors	Employee
Centralized setup for organizational structures and attendance settings	Clear view of attendance and leave status for their teams	Easy access to attendance details and leave balance
Configure approval workflows to match company policies	Faster approval process with standardized rules	Clear and predictable leave request process
Generate consistent attendance and leave reports	Real-time updates for leave submissions and approvals	Receive timely updates and notifications
Set up attendance rules, worksheets, leaves, and WFH policies	Assign tasks and track progress

My Approvals

Manage approvals from one centralized place—review, act on, and track requests faster while ensuring consistency and visibility across the organization

Key Features

- View and manage all pending approvals in one place
- Approve, reject, or reassign requests with comments
- Track request details, history, and status
- Filter and sort approvals for quicker decision-making

Industry Pain Points

- Scattered approvals cause delays
- Hard to prioritize approvals when all requests look the same
- Employees wait longer due to slow or missed approval actions
- No quick way to review request details before deciding

Business Goals

- Centralize all approval activities in one workspace
- Speed up approval turnaround times
- Improve transparency and ownership around approvals
- Reduce delays caused by scattered communication

Role-Specific Benefits

Managers & Supervisors	Employees	HR, Finance & Admin Teams
One place to see and act on all approvals	Faster responses on submitted requests	More consistent workflows
Faster decision-making with clear request details	Clear tracking of approval progress	Improved transparency and accountability
Reduced time spent searching for pending actions	Less follow-up needed with managers	Reduced operational delays

Sales Field

A lightweight field sales app that helps your teams work efficiently in the field and stay fully connected with your back office – ideal for industries where timely orders, accurate stock, and disciplined routes matter most

Key Features

- Capture customer visits with notes, images, and follow-ups
- Convert quotes into sales orders during field visits
- Access product information, discounts, and stock availability
- Work offline and auto-sync when connected

Industry Pain Points

- Sales teams work across scattered tools for leads, quotes, and orders
- No visibility into field visits or follow-up activities
- Orders recorded on paper or WhatsApp, leading to errors
- Slow coordination between distributors and sales teams

Business Goals

- Maintain transparent field activity logs
- Improve retail/clinic/workshop coverage
- Strengthen coordination with distributors and back-office
- Provide real-time visibility into sales performance

Industry Specific Benefits

 FMCG & Retail	 Pharmaceutical	 Automotive Spare Parts
Capture outlet orders quickly during busy business hours	Track pharmacy and clinic visits with detailing notes	Capture urgent part needs directly at workshops
Convert quotes into invoices without delays	Record product demand based on prescriptions requested	Check stock and pricing before confirming orders
Flag low-stock items at shops before they turn into lost sales	Improve coverage of high-priority pharmacies on fixed routes	Improve visit frequency for high-usage workshops

Therapy Care

Therapy operations become easier to manage with centralized scheduling, structured plans, and real-time tracking—helping clinics work efficiently, improve patient involvement, and support patients and caregivers through a secure, cloud-based experience.

Key Features

- Centralized workspace for therapists, admins, and care coordinators
- Patient portal for online appointments and therapist availability
- Access to patient history, notes, assessments, recordings, and reports
- Secure, compliant data handling with controlled user access

Industry Pain Points

- Inconsistent therapy planning across providers
- Limited visibility into patient progress
- Heavy workload for scheduling, documentation, and assessments
- Gaps in communication between therapists, caregivers, and staff

Business Goals

- Standardize treatment plans for consistent care
- Improve efficiency with automated scheduling and digital intake
- Strengthen patient engagement with clear plans and reminders
- Offer secure, compliant access across all therapy centers

Role-Specific Benefits

Clinic Admin	Therapists / Providers	Care Coordinators	Patients
Automated booking, intake, and payment workflows	Less time on manual documentation	Clear view of sessions, progress, and follow-ups	Simple portal for self-booking
Organized digital records for compliance	Standardized templates for consistent care	Fewer scheduling conflicts	Secure online payment options
Visibility into schedules and utilization	Real-time progress insights	Confident, well-supported hiring decisions	Access to plans, notes, and reminders

KAISPE Care

Clinics and hospitals gain a unified platform to manage patient engagement, doctor workflows, EMR, billing, insurance, and appointments—streamlining daily operations while improving care delivery across every location

Key Features

- Patient portal for profiles, appointments, payments, and meds
- Doctor portal with schedules, notes, and prescription uploads
- Admin workspace for setup, staff, insurance, and controls
- EMR with encounters, notes, procedures, vitals, allergies, and meds

Industry Pain Points

- Manual patient intake and appointment management
- Fragmented EMR, billing, and insurance workflows
- Limited doctor–patient communication outside clinic hours
- Slow billing cycles and frequent claim errors

Business Goals

- Improve patient experience through digital self-service
- Streamline doctor and admin workflows
- Digitize clinical documentation and EMR
- Accelerate billing and payment collection

Role-Specific Benefits

Patient	Doctors	Administrators / Management
Simple digital onboarding	Clear appointment view	Centralized staff & clinic management
Easy booking & rescheduling	Quick access to EMR	Automated notifications
Online prescriptions & history	Simple prescription upload	Streamlined billing & insurance
Secure health information access	Support for online consultations	Visibility across all clinics & providers

FlexPayroll

A payroll solution that enables accurate and compliant payroll processing, eliminating the need for external payroll systems or custom development while ensuring seamless financial integration

Key Features

- Configurable rule- and formula-based payroll calculations
- Automated payroll processing and validations
- Seamless posting to financial accounts and dimensions
- Support for multiple legal entities and regions

Industry Pain Points

- Payroll not available as a standard capability
- High cost and risk during D365 upgrades
- Hard-to-maintain custom payroll solutions
- Manual or error-prone GL postings and reconciliations

Business Goals

- Enable payroll processing within the ERP environment
- Reduce reliance on external systems and custom code
- Ensure accurate and compliant payroll calculations
- Streamline financial posting and reporting

Major Benefits

Finance Teams	HR & Payroll Teams	IT & ERP Teams
Accurate payroll journals posted directly to GL	Configurable payroll rules without coding	Lower maintenance overhead
Faster financial close	Reduced manual payroll effort	Upgrade-safe, extension-based solution
Audit-ready payroll data	Consistent payroll processing across entities	Scalable architecture

PayrollPlus

A payroll add-on that simplifies payroll operations for small to medium-sized businesses, helping teams manage salaries, benefits, and taxes efficiently while staying compliant and connected to financial data

Key Features

- Automated salary, benefits, and payroll processing
- Built-in tax compliance for federal, state, and local regulations
- Detailed employee profiles with customizable pay and benefit setup
- Direct integration with financial data for accurate payroll posting

Industry Pain Points

- Difficulty keeping up with tax regulation changes
- High cost and risk during D365 upgrades
- Time-consuming manual payroll calculations
- Manual or error-prone GL postings and reconciliations

Business Goals

- Enable payroll processing within the ERP environment
- Reduce reliance on external systems and custom code
- Ensure accurate and compliant payroll calculations
- Streamline financial posting and reporting

Major Benefits
