

Improve Power BI User Adoption

Information is only valuable when your stakeholders can leverage it

When you invest in data systems and solutions to enable your employees to make data-driven decisions, you want to ensure that these solutions are being used.

High levels of user adoption are important to achieving maximum return on your Power BI and analytics investment, however, measuring user adoption can seem like a daunting task. Often, organisations shy away from this task altogether.

Karabina's Power BI User Adoption Accelerator helps to overcome this obstacle

Our business intelligence on Power BI approach enables a data-driven culture across your organisation and results in a higher return on investment to prove the value of your Power BI spend.

About Altron Karabina's Power BI User Adoption Accelerator

Our Accelerator helps organisations to:

- Better understand the performance of reports
- Understand which users are accessing the reports
- Understand what data is being accessed
- Identify which reports are not in use
- Identify which reports are most used and most relevant to the business

This approach shows that business intelligence can be a proactive tool, rather than a historical record of past performance.

The user adoption reports provide insight on how to engage all users by providing them with the tools they need, to meet their specific information requirements.

Improve Power BI User Adoption

Why organisations need Power BI user adoption reports

- Provide users with the tools they need to make more informed business decisions.
- Support user growth and ensure optimum performance at all times, creating a BI platform that can handle a large number of users, a large amount of data, and a large volume of queries.
- Provide standardised pre-packaged content.
- Provide accurate data. User adoption puts the spotlight on data quality. If users question the accuracy and consistency of the data being delivered to them, they will abandon your solution and find other ways to get the information they want.
- User behaviour can be better managed and guided if it can be monitored.

Outcomes

Improve access to data

Improve Power BI users and decision makers' perception of value

Reduce Power BI costs and better manage resources

Use data to improve operating efficiency

Azure data centres are coming to South Africa

Altron Karabina leverages the Azure cloud platform and moving from international data centres to local Azure data centres has many benefits - Meet local residency and compliance laws, improve data connection latency, and more.

Why Altron Karabina?

Altron Karabina is a 17-year-old business focused on delivering quality data management and analytics solutions to solve your business problems. We're specialised in Microsoft solutions and are 13 times Microsoft Data Analytics Partner of the Year Award winners.

We adapt quickly to your requirements and have developed our own agile approach to prove quick time-to-value for our customers, thereby allowing them to make quicker and more accurate data-driven decisions.
