Within 10 years, we will see the number of devices connected to Internet jump to **152K/Minute vs 4,800 today.**

Insight Of Digital Transformation

Customers Evolving

- Work is Happening Everywhere
- Everything is Rushing to the Cloud
- Digital Transformation Drives Productivity

Source: ESG – 750 Citrix Customers – Summer 2017

Digital Workplace describes

- An enterprise platform that is basically social, putting people at centre of things
- It cuts through the complexity of legacy tools and platforms to provide simple ways of completing common tasks
- Delivering what a user needs at the location they are based at the time they need the info
- A shift towards more nimble and flexible ways of leading and organizing companies
- improving the employee productivity by enabling them with the info required

Key

Building blocks of Digital Workplace

Unique Identity: Digital Workplace puts people at the Centre and foundation for This single, unique identity for each user. This identity includes contact details, Roles, responsibilities, connections, skills, interests, personality, work and play.

Increasing Awareness: One of the foremost goals of Digital Workplace is to bridge or break down silos within the organization / Institute. At any given point of time, a users would have the visibility of what's happening within the org., gets an opportunity to discover the unexpected – without being overwhelmed by noise and distractions.

Trust Within: Digital Workplace supports, and is the result of an open and collaborative culture. To achieve this, there must be trust in the platform, confidence in other users in speaking out, equal participation and support from the organization.

Key

Building blocks of Digital Workplace

Always Available: Digital Workplace must provide access to the platform across multiple devices, anytime and anywhere. With most users being away from their desks / offices, Digital Workplace ensures the Connectivity.

Design Simplicity: Easy navigation, Simple design, Efficiency and Elegance are the foundation of successful Digital Workplace. Easy navigation ensures adoption and acceptance by the users within the organization. Focusing on the User experience and a foundation of usability ensures a solution that works.

Increase Value: Digital Workplace delivers tangible business value by increasing the productivity of every employee. Not only does it bring in efficiency but also success across the organization / institute. This is the primary goal of implementing Digital Workplace within an organization.

Feedback

Secure in the Cloud or On Premise AWS / Azure / On Premise / KCS SaaS

- KCS iNet is Enterprise Collaboration Suit built upon SharePoint.
- In the today's cloud era, it empowers organisation with **“New way to working together..!”**

What is iNet ECS?

- KCS iNet is Enterprise Collaboration Suit built upon SharePoint. In the today's cloud era, it empowers organisation with “New way to working together..!”
- It is a Centre Point for various collaboration needs of business and empowers the business
- Equally suitable for Small, Mid and large business
- Completely built by using the SharePoint power
- Single destination/Center point for all different business processes
- Flexible module selection/Licensing model
- Easily scalable, Self Service Reports & BI
- Option to get the other services of Office 365 with iNet: Skype for business, Email ...etc.

What is SharePoint

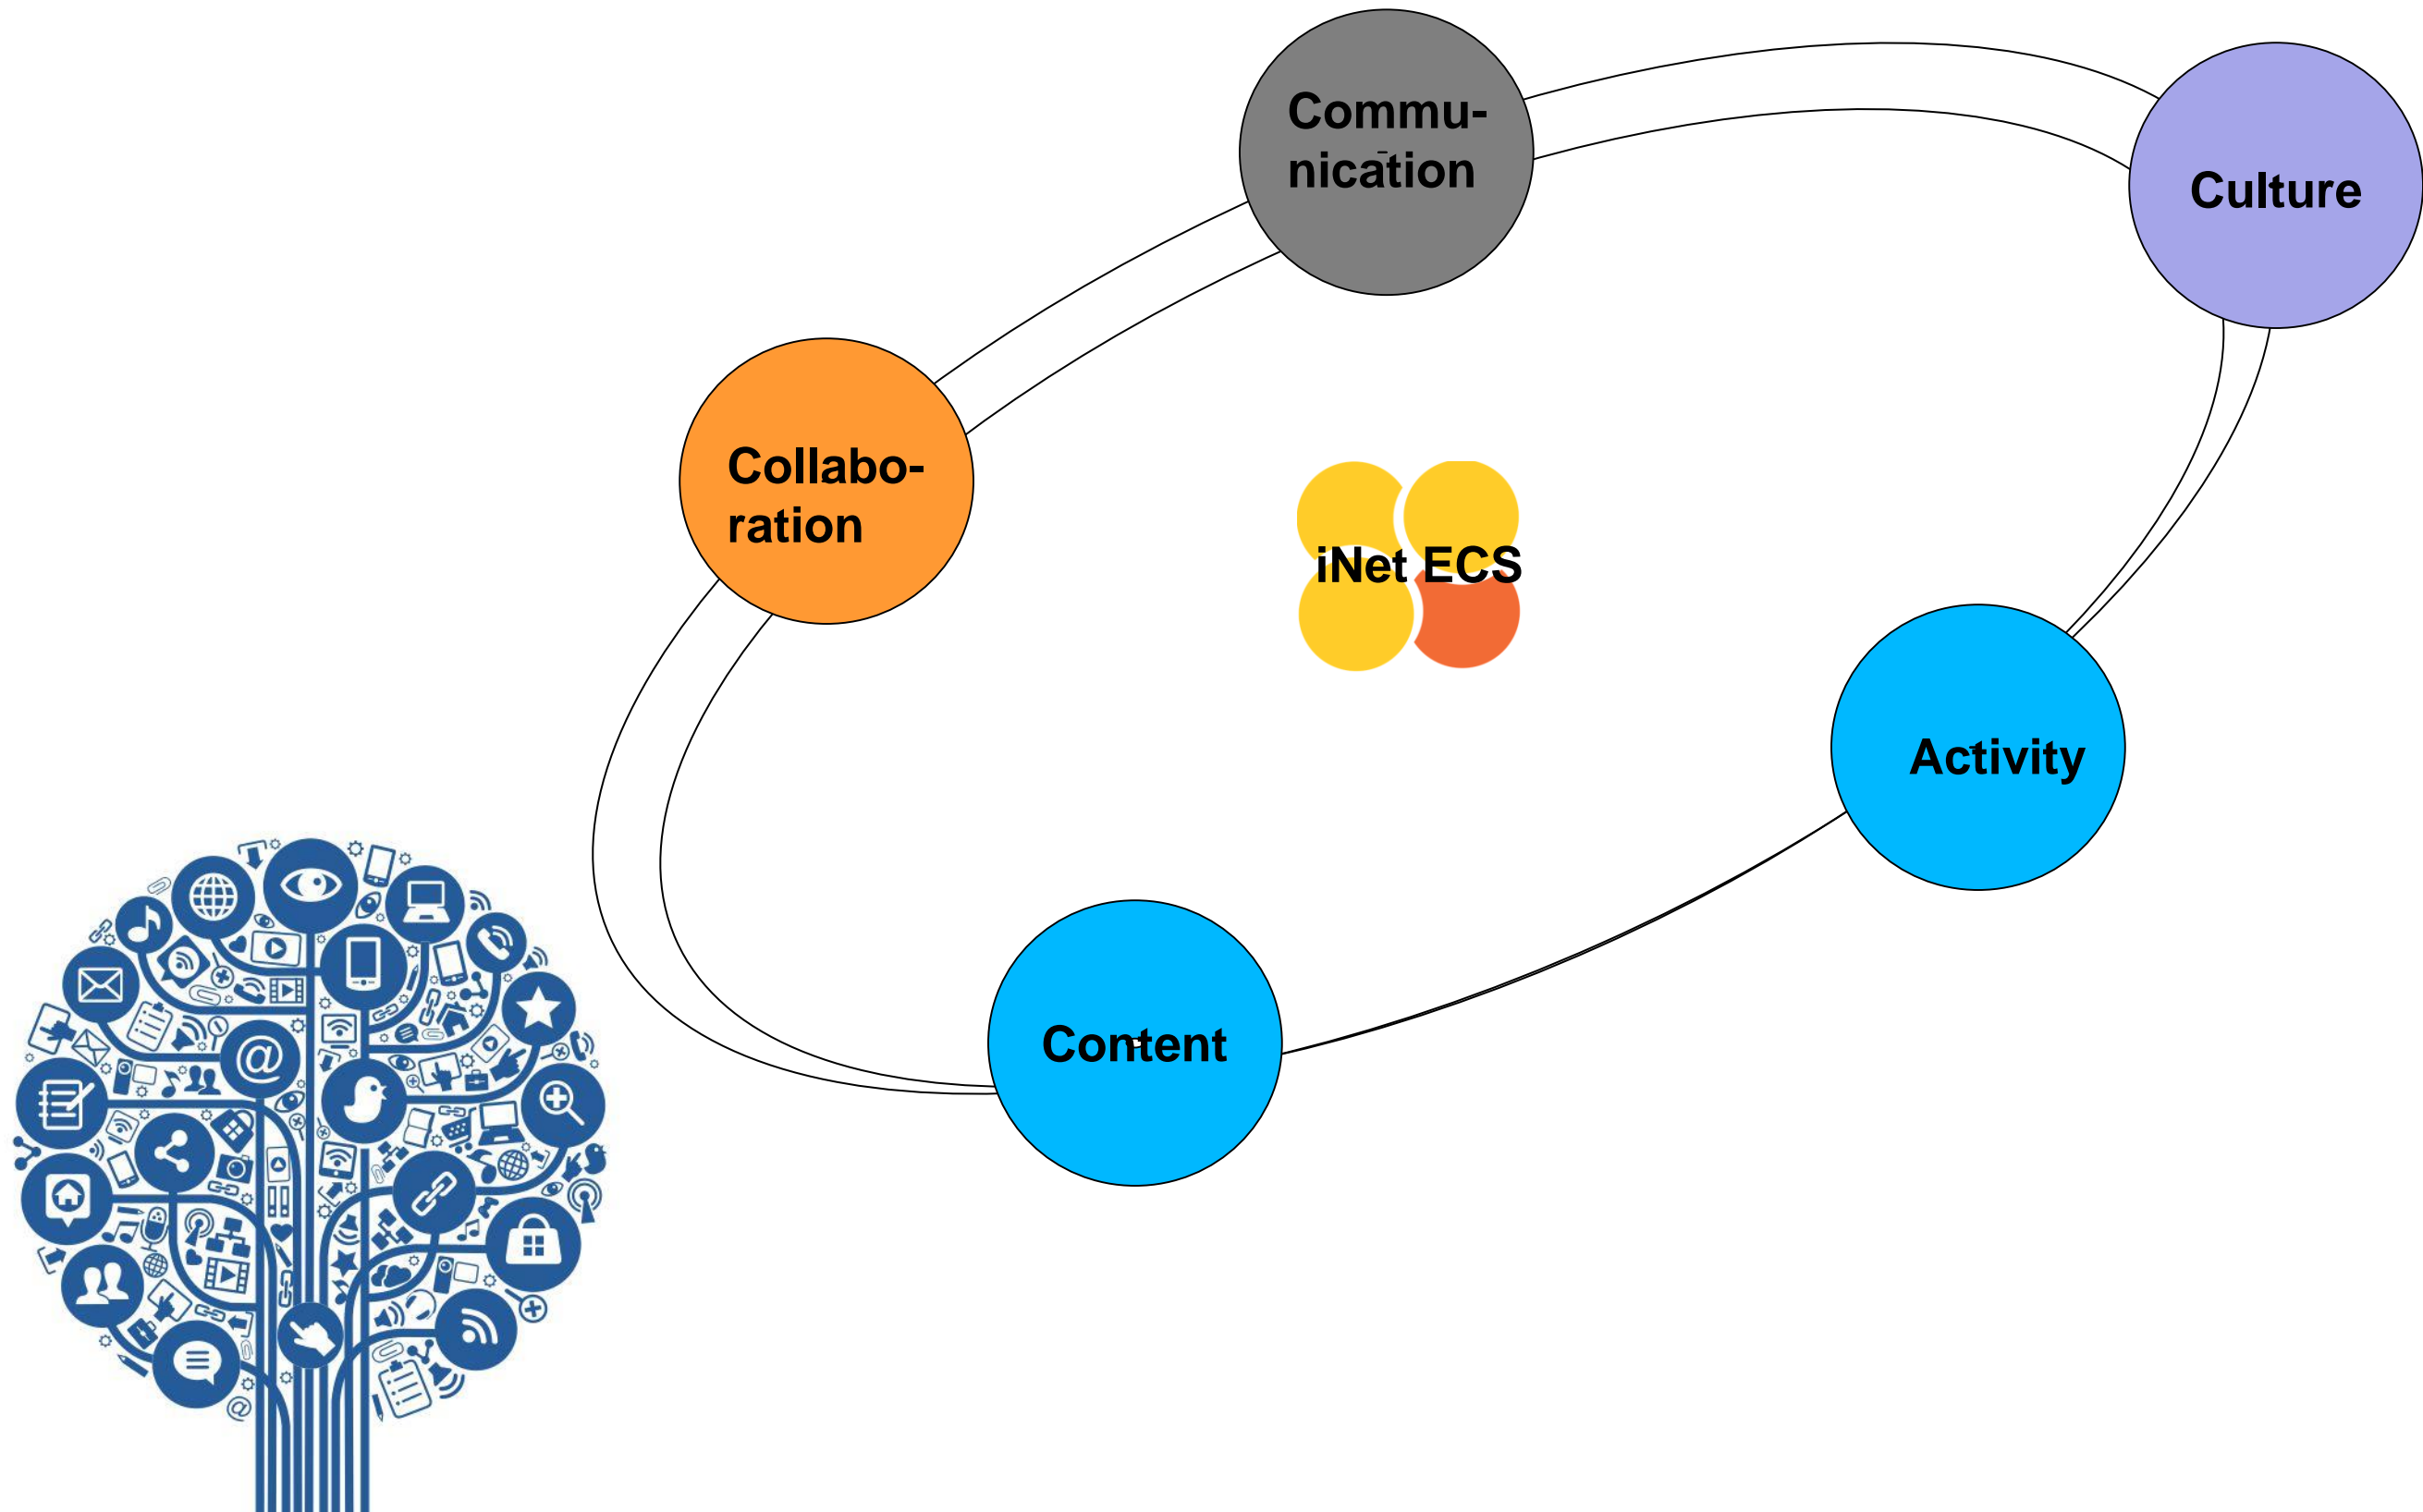

- SharePoint: A new way to working together...
- SharePoint is a web application framework and platform developed by Microsoft, first launched in 2001.
- It isn't any one software program but rather a platform for several different kinds of programs.
- SharePoint incorporates a complete development stack based on web technologies and standards-based application programming interfaces (APIs).
- As an application platform, SharePoint provides central management, governance, and security controls for implementation of these requirements. The SharePoint platform integrates directly into Microsoft Internet Information Services (IIS), which enables bulk management, scaling, and provisioning of servers, as large organizations and cloud computing providers often need.

Features

Features

Collaboration

- Collaboration can be informal, small-scale, within local areas or wholesale shift toward becoming a 'social business' where it is a key part of the organizational 'DNA'
- Collaboration has the potential to drive innovation, reduce duplication of work and enhance overall knowledge management practices
- Regardless of the intensity of use, collaboration and social tools help to reduce organizational silos, improve staff effectiveness when working in groups, and assist in delivery of projects
- In the digital era, the modern business enterprise workplace is a dynamic and diverse environment that is noteworthy for its dependence on mobile-ready communication tools and devices.
- Enterprise personnel are often dispersed across departments, buildings, and even countries, but somehow, they must find a way to work and collaborate. Cooperation and collaboration across these various boundaries is the key to success, and enterprises must supply tools that make it possible.

Features

- Information sits at the heart of all Organizations / Institutions, driving decision-making and underpinning service delivery. FACT: Management of this information is left to chance. Research shows that shocking 42% of managers said they accidentally used wrong information atleast once a week.
- To be effective and valuable, information needs to be stored, managed, delivered and consumed in ways that support the needs of users and the organization as an whole.
- Information is only useful if it can be found and understood. iNet ECS could be home to your content that is accurate, trusted, complete and up-to-date; enabling users to come to informed decisions.

The following gets included in the Content module:

Articles, Blogs, Wikis, Pages, Events, Photo Sharing & Albums, Video Sharing, Polls & Surveys, Smart Search, Homepage, Drag-and-drop page builder, Gamification, Approval Workflows, Moderation, Comments, Rating Controls, Like Buttons, Best Content, Tags and #hashtags, Management Dashboard, Member / Staff / Student Management, CMS / Content moderation

Document & Productivity

Talking about Productivity, employees across the company need documents in order to carry out their daily tasks. Getting access to these documents sometime can be a daunting task.

What if Collaboration, User experience, Information sharing, Document management – is made available to every user immediately upon 'single sign on'. And with the eDocs – Document Management System, finding a document is just a click away!

Features

- It's the mark of a strong culture that users are able to be effective and resilient, even in the face of major organizational changes such as explosive growth, marketplace or even downsizing.
- Organizations with mature and effective cultures operate as 'well-oiled machines', where staff know what they should be doing, and how they should be working with peers.
- Engaged users are also more motivated and productive. Studies show that good staff engagement increases overall firm productivity, and reduces incidents and absenteeism.
- The following gets included :
 - Employee Directory
 - Personal Activity Streams
 - Information Rich Profiles
 - Publishing tools
 - See Who's Connected
 - Everyone is one click away
 - See who's Online
 - Gamification
 - Activity Streams
 - Real-Time Notifications
 - Chat / Skype
 - Task Manager
 - Calendars
 - Forums & Discussions
 - Case & Issue Tracker
 - Ideation

Business Agility

Agile is the buzz words these days. So how does a company bring in agility (read changing / adapting to the needs of changing business)?

Inspiring employees on daily basis, means having a constant feed of News, Information, Events which can be accessed by the employees daily, using any device, centrally.

REINVENTING THE VISION OF YOUR BUSINESS!

INSPIRED WORK

ACCELERATE INNOVATION GIVING YOU
THE AGILITY TO MEET THE NEEDS OF
YOUR CHANGING BUSINESS.

Features

Communication

- It's no small challenge to keep staff informed. Paper newsletters have had their day, and the flood of email messages now means that many staff treat corporate updates as 'internal spam'. Against this backdrop, the need to communicate within organizations has never been greater. As organizations grow in size and complexity, it becomes increasingly hard to communicate to all staff, and to connect them with the corporate mission and vision.
- The starting point for any organization is to consolidate its Intranet as the core channel for internal news. This replaces paper newsletter that are laboriously created every month and emailed to all employees.
- Modern Intranets can offer increasingly rich toolbox of capabilities for internal communication including;
 - Two way communication, allowing users to comment and interact with both corporate and local news
 - Targeted communication that ensures each users receives relevant updates, based on their business division, geographic location or job role
 - Integration between communication and collaboration to deliver seamless experience for a user
 - Delivery to mobiles, enabling staff to keep in touch regardless of where they are and what device they are using

Features

Activity

- The day-to-day work of organizations is built around tasks and processes. These may be small activities, such as filling in a form, or making a request. They can also be large, business spanning systems that provide the engines for core business.
- In all cases, organizations have struggled to establish efficient ways of conducting and completing these tasks. Bottlenecks and gaps abound, and integration, where it exists, is often fragmented and piecemeal.
- As a result of these issues, organizations have not yet fully realized the benefits of new technologies, and significant opportunities for further efficiency gains still remain.
- It is for this reason that business process improvement is the top priority for IT teams and CIOs.
- Modern intranets provide the 'front door', a single access point, to business tools and systems. By surfacing key tasks, and simplifying access to them, intranets provide immediate productivity gains.

KCS' goal is to deliver an Intranet solution that is 'A place for accessing information and doing things' not just for reading things

Access to Knowledge Base

How would a employee benefit from projects executed earlier?

Creating a knowledge base with lessons learned could be a blessing in disguise. Not only Would it help understand the situations & tested solutions, but would also help them mitigate Challenges easily and without wasting time

Company / Institute website	iNet ECS Feature	Benefit
