Keepnet is a Human Risk Management Platform that protects businesses against social engineering attacks using security awareness training and various phishing simulations.

Vishing Simulator	Simulate voice phishing attacks to train and test your employees and security protocols.
Phishing Simulator	Leverage AI-powered phishing simulations to test and train your employees. Boost reporting by 92% and lower dwell time by 87% success.
Smishing Simulator	Test and train employees against SMS phishing attacks.
Quishing Simulator	Simulate QR code-based phishing to evaluate and educate on emerging threats.
Callback Simulator	Train on recognizing and responding to fraudulent callback requests.
MFA Phishing Simulator	Address multi-factor authentication bypass techniques through MFA simulations.
Awareness Educator	Train your employees with the best security awareness training courses and gamified content to create a security culture.
Incident Response	Respond to Phishing, Ransomware, BEC, and other social engineering attacks and analyze, identify, and remove them 48.6 times faster.
Email Threat Simulator	Test and harden your Office 365, Google Workspace, and other secure email gateways to stop phishing attacks.
Threat Intelligence and Threat Sharing	Find compromised accounts in your company, provide actionable intelligence on current threats,and exchange threats in trusted communities with 1M+ active threat hunters protecting you.
