Unify your employee experience across the globe

Hire, pay and maximize performance all on one platform

Employee experience remains elusive for many organizations

The lack of trust and a deteriorating experience is recipe for attrition, which could impact organizational growth.

Performance

1,09,972
performance appraisals conducted

69,245 praises recorded

20,000 employees promoted

2023 Statistics

Your security is our top priority

Keka's infrastructure is managed by Microsoft Azure, the most secure enterprise cloud platform which offers the highest level of security for your crucial information

ISO/ IEC - 27001:2013

Keka uses ISO/IEC 27001:2013 standards to secure all our assets, including financial and intellectual property.

SOC 2 compliant

Keka is SOC 2 Type 2 Compliant. Security, confidentiality, availability, and privacy controls are in place to monitor customer data.

GDPR compliant

GDPR empowers organizations and individuals with data control. We adhere to GDPR standards, ensuring data protection and privacy compliance.

Disaster recovery

Keka's infrastructure is built to endure disasters, ensuring continuous business operations. With Microsoft Azure, we eliminate single points of failure to ensure business continuity.

CCPA Compliant

We adhere to CCPA privacy regulations, safeguarding consumer data rights and ensuring transparency in handling.

DDoS protection

Azure DDoS protection safeguards against DDoS attacks, we adhere to OWASP secure coding practices that ensures code security for robust defense.

Internal systems connecting to Keka have strict IP restrictions. Azure resources are accessible solely through the Keka API, protecting them against potential attacks.

Authorization and access

Access controls are stringent for all systems, including customer tenants, Code Repository, and DB are restricted solely to authorized personnel. Every access is logged for accountability.

Alerts and monitoring

The app is watched over by App Insights, with alerts set up for any anomalies. Azure's managed DB services monitor the database, and our DevOps team promptly takes action on any alerts.

Sensitive data encryption

All sensitive data is encrypted with both symmetric and asymmetric encryption. This ensures there are no patterns even in the encrypted data.

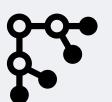

Output Certificates, keys and secure tokens

All of these are managed through the Azure Secure Vault and pulled in run time by Azure App Service. These are changed / recycled from time to time with random time intervals to ensure no pattern is detected across tenants.

End to end encryption

Data is encrypted while at rest and in transit with 256-bit SSL.

For the of great employee experience

THANKYOU
