

Hooper

A Cutting-Edge

< Low Code / > Platform

Build apps | Orchestrate Data | Automate Processes

Built on Microsoft Azure, Hooper intelligently connects distributed data sources, making information accessible and actionable across departments.

Hooper helps you execute strategies and processes with Rapid App Development (RAD), enabling you to design workflows of your business enterprise with a 'drag and drop' based visual designer.

Our Solution

HOOPER

A Low-Code Application Platform

1

Leveraging the power of **Data Orchestration**, Hooper address distributed information across the enterprise

2

Using **Hyperautomation**, Hooper manages and delivers information to the rightful place at the right time, empowering businesses

3

Be it Large Enterprise or SME, Hooper enables all kinds of enterprises to resolve their challenges

The Hooper Framework

The platform leverages the Hooper Data Flow Framework and puts easy-to-use apps in the hands of business users to apply business policies and resolve data incoherences.

Orchestrate

Data Orchestration Framework for SOA, SaaS, using APIs

Programmable framework to design business logic, exchange data & integrate via rich APIs.

Automate

Hyper Automation Engine utilizing workflows & rules

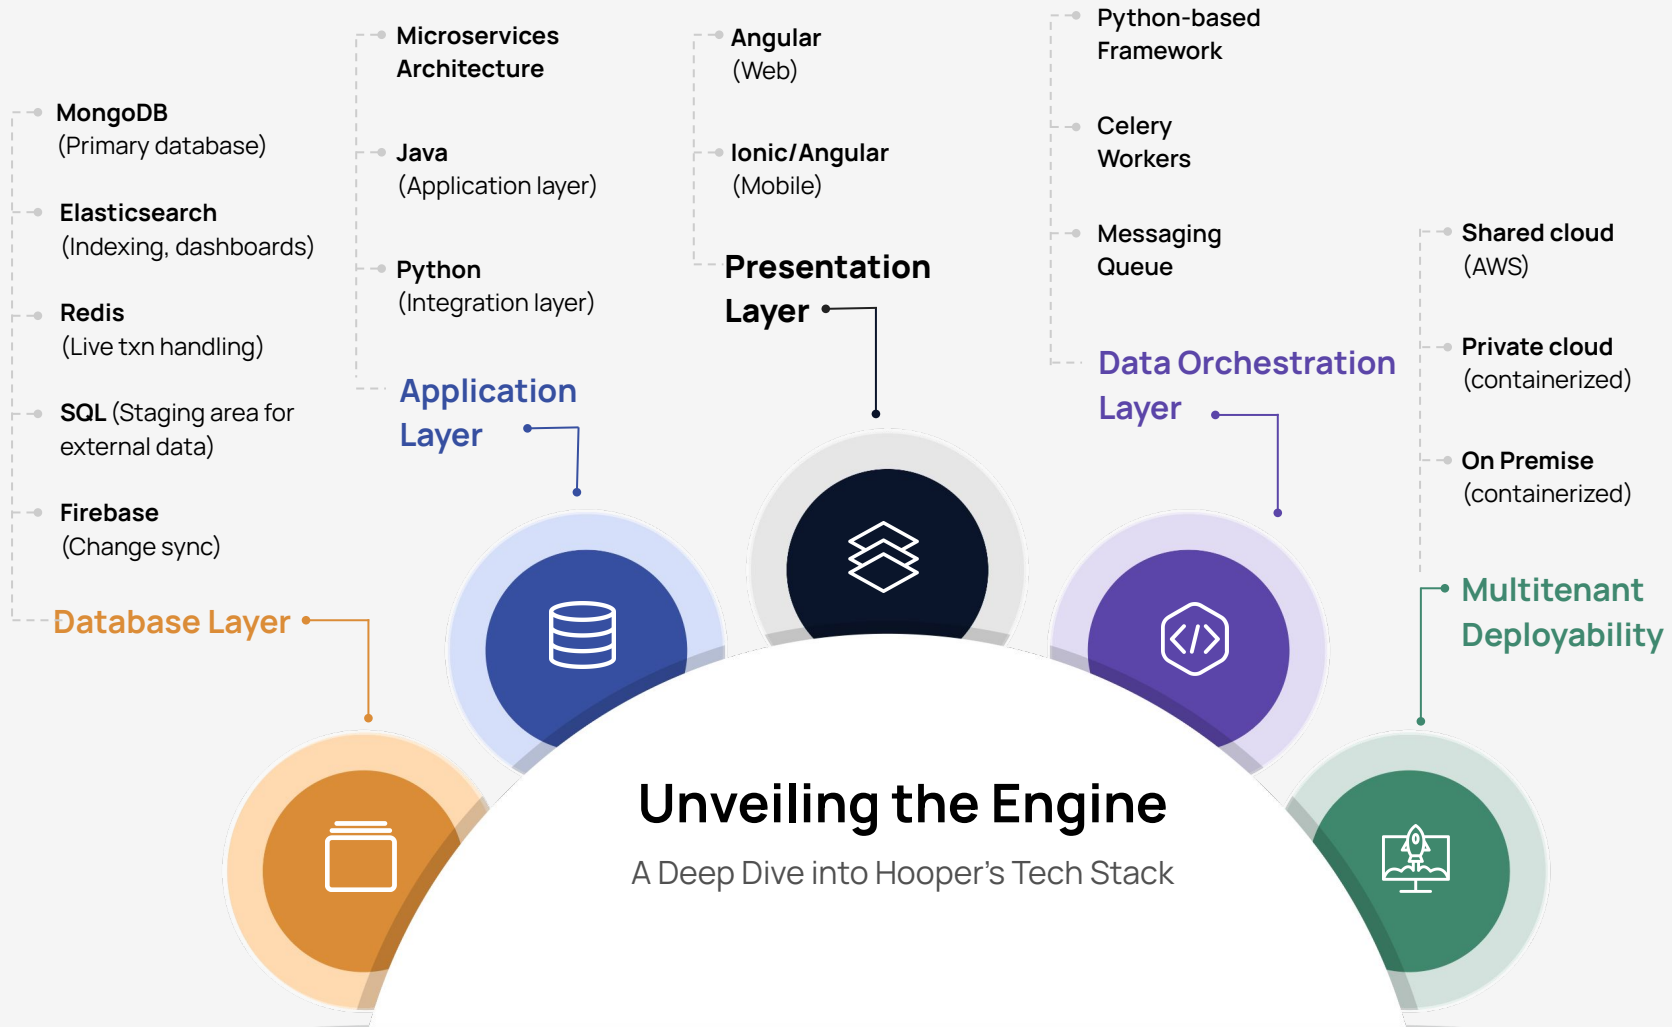

Fully configurable rule and workflow engine to design and automate business processes.

Resolve

App Creator Studio for data resolutions, business policies

Create complex business apps, using a drag & drop visual framework & configuration studio.

Platform Breakthroughs

Delving into Key Numbers and Achievements

- ⊗ Product architecture
- ⊗ Project management
- ⊗ Product development & testing

- ✓ Instant web & mobile apps
- ✓ Dynamic workflows
- ✓ Easy on-boarding & training

- ✓ Faster digitization & automation
- ✓ Distributed team collaboration
- ✓ Centralized & organized data

Improve brand, revenue & drive growth.

Issues Resolved

Engage Technicians

Improve collaboration by auto assigning tickets. Identify technician wise performance, over time.

Automate Ticket workflows

Track, manage, and automate ticket workflows like scheduling, escalations etc., to decrease manual overhead.

Facilitate remote support for techs

Equip field teams with mobile tools to capture evidences, track locations and close tickets quickly & effectively.

Asset & maintenance

Manage maintenance tasks and schedules; track asset-wise schedules and automate AMC processes.

Automatic reports & dashboards

Schedule reports to ensure CAPA processes are followed rigorously even with lean, high performing teams.

Integrate across erp & crm systems

Decrease manual spreadsheet use to interface data in between systems, rely on seamless system connectivity instead.

UNIFIED SAFETY INTELLIGENCE CENTER

Consolidate critical inspection types, audits, safety protocols into command center. Eliminate siloed safety management forever.

EXECUTIVE-READY SAFETY ANALYTICS

Transform complex safety data into actionable intelligence with dashboards that demonstrate compliance ROI.

INCIDENT PREVENTION

Analytics transform safety data into insights, helping you address risks before they become incidents - reducing lost-time injuries.

CLOSED-LOOP RISK MITIGATION

Observation-to-action workflows ensure every safety concern is captured, assigned, tracked, resolved — with accountability at every step.

REAL-TIME COMPLIANCE ASSURANCE

Geolocation-verified inspections with image evidence provide regulatory ready documentation that withstands even the most rigorous audits.

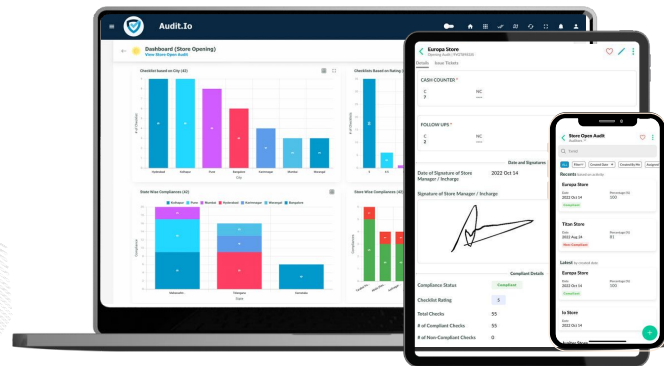

ENTERPRISE-WIDE SAFETY ORCHESTRATION

Intelligent workflow automation ensures your safety processes scale across your organization without adding administrative burden to your HSE team.

EHSSENTIALS
SUITE

An end-to-end toolkit to help go from reactive ops to proactive safety leadership.
