

Kin + Carta

Purview Enablement

Purview Enablement

In this 5-day assessment, Kin + Carta will help enterprise customers define their Purview implementation and deploy, enable and extend the tool to meet their unique transformational goals and objectives.

Overview

Enabling Azure Purview for an organization is a cross-functional initiative that combines Azure experts, Database Administrators, Compliance Specialists and Data Engineers and is described as a unified data governance service that helps manage and govern on-premises, multi-cloud and software-as-a-service (SaaS) data. With Azure Purview, you can easily create

a holistic, up-to-date map of your data landscape with automated data discovery, sensitive data classification and end-to-end data lineage. In this 5-day assessment, Kin + Carta will help enterprise customers define their Purview implementation and deploy, enable and extend the tool to meet their unique transformational goals and objectives.

Challenges

Harnessing the power of Purview: Most enterprises acknowledge harnessing the potential of a Data Governance tool as 'table stakes' to compete in the coming decades, but often ato define their Purview implementation and fully utilize, enable and then extend the tool to meet transformation goals and objectives.

Solution

This 5-day assessment delivers a blend of consulting and technical expertise. After evaluating and understanding your business goals, Kin + Carta will demonstrate how Purview can help you achieve those goals and will then deliver a Purview implementation that will allow your business to continue to further build, explore and test after the assessment.

Staffing Model

1
Cloud Architect

1
Data Specialist

5 Day Assessment Activities

Initiate	Explore and learn	Solution Development	Deploy
Day 1	Day 2	Day 3-5	
Azure Purview Overview Briefing	Create Purview Sandbox	Map objectives to learnings from Sandbox	Deploy Purview to production
Identify Business challenges, opportunities & scenarios	Initial Purview deploy	Create data mapping, data classification, business glossary & data catalog	Configure data sources and custom classification
Document current data classifications & compliance requirements	Map & load sample data	Identify 3 data sources for project	
Identify Data sources & locations	Run initial purview analysis	Create 1 custom classification	
	Demonstrate capabilities	Security model	
	Demonstrate Kafka Event Hub Integration & Atlas API		

Deliverables

- 2 Day Workshops
- Deploy Purview to Client's Subscription
- 3 Data Sources and 1 Custom Data Classification added
- Test and document build
