# AIP Accelerator

Discover, classify, and protect sensitive information all while controlling access to your critical data wherever it may go.

## Control and help secure email, documents, and sensitive data that you share inside and outside your company.

From easy classification to embedded labels and permissions, enhance data protection at all times with Azure Information Protection, no matter where it's stored or who it's shared with.

AIP addresses the critical need for any organization to control data sharing both internally and externally. Implementation of AIP allows for:

- Classification of data based on sensitivity
- Persistent data protection, inside and outside your organizational boundaries
- Visibility and control to data sharing and access
- Secure collaboration with granular access controls
- Simplified data protection through direct Office suite integration
- Flexible deployment and management controls

## Deliverables

- ▶ Completed AIP overview and planning session
- ▶ Expert assistance defining a labeling and classification structure for sensitive data
- ▶ Configuration of AIP to support your unique labeling requirements
- ▶ Guided deployment of the Unified Labeling client
- ▶ User communications and guide to streamline onboarding
- ▶ Production pilot of your labeling solution
- ▶ Documentation of your environment, and next steps guidance
- ▶ Initial production deployment of Information Protection

KiZAN will assist with an initial production implementation of AIP by addressing standard use cases and up to two scenarios unique to your organization with an optimized classification structure. This will enable rapid adoption of the solution with minimized user impact.
