

## MIGRATE AND MODERNIZE SECURELY

# Move to Azure with Confidence, Speed, and Security

### SPECIAL OFFER

Migrating legacy infrastructure is no longer optional. But moving without the right strategy can create disruption, security gaps, and long-term complexity.

KiZAN helps organizations move confidently to Microsoft Azure with a structured, security-first approach designed to improve agility, strengthen governance, and build a scalable foundation for future innovation and AI adoption.

### Assess, Migrate, and Optimize with Hands-On Expertise

Migrate and Modernize Securely is a focused engagement that covers every stage of that journey, from assessing and planning your current environment to migrating and optimizing workloads across servers, databases, applications, and data platforms, all with hands-on expertise and minimal business disruption.

Build a  
More Secure,  
Modern Cloud  
Foundation.

### From Legacy Infrastructure to Modern Cloud

The Migrate and Modernize Securely engagement is scoped to deliver tangible results across the full cloud transformation lifecycle:

- **A clear modernization strategy.** Gain visibility into your current environment with asset discovery, dependency mapping, readiness scoring, and migration prioritization.
- **A secure Azure foundation.** Establish governance, identity, networking, and security guardrails aligned to Microsoft best practices and long-term scalability.
- **Reduced operational risk.** Minimize downtime and disruption with structured migration waves, rollback planning, validation testing, and production-ready cutovers.
- **Improved agility and scalability.** Leverage Azure's flexibility to provision resources faster, scale on demand, and support evolving business needs.
- **Cost optimization opportunities.** Identify opportunities to reduce infrastructure costs and improve operational efficiency through cloud-native services.
- **An AI-ready platform.** Create a modern data and application foundation that positions your organization to adopt Azure AI and advanced analytics capabilities when ready.

## How the Engagement Works

Our four-phase approach moves your organization from assessment to operational readiness:

- **Discover and Assess**

Inventory servers, databases, applications, and dependencies while evaluating cloud readiness and migration complexity.

- **Landing Zone and Plan**

Deploy or enhance your Azure landing zone, establish governance and security controls, and build a phased migration roadmap.

- **Implement and Migrate**

Execute migrations to Azure or Azure VMware Solution, apply security hardening, validate workloads, and complete production cutovers.

- **Optimize and Hand Over**

Fine-tune performance, optimize costs, establish operational runbooks, and prepare your team for ongoing cloud management.

## Designed for Organizations Ready to Modernize

Migrate and Modernize Securely is well suited for:

- Organizations modernizing legacy infrastructure or datacenter environments
- IT and infrastructure leaders responsible for cloud migration and operational resiliency
- Security and compliance teams focused on governance and risk reduction
- Businesses looking to improve scalability, performance, and cost efficiency
- Organizations preparing their environment for AI, analytics, and future modernization initiatives

## Why KiZAN

For more than 30 years, KiZAN has brought together deep technical expertise and real-world implementation experience to help organizations navigate complex technology transitions.

As a nationally managed Microsoft AI Cloud Partner, we have the insight and resources to strategize, design, and deploy tailored cloud solutions that deliver measurable results. Our experienced Azure and infrastructure specialists provide hands-on implementation, migration support, and operational knowledge transfer every step of the way.

**Contact KiZAN to learn how Migrate and Modernize Securely can help your organization reduce risk, improve agility, and accelerate cloud transformation.**
