

Datacenter Modernization

Save money and bring your workloads to the cloud with our certified best practices.

IT managers seeking to confidently migrate servers and databases to the cloud can take advantage of KiZAN's certified best practices. As part of our Datacenter Modernization, you'll receive a prioritized plan of the assets that need to move, cloud readiness training, deployed supporting services to manage the assets after they've been moved, and of course a tested and validated migration of your servers and databases.

According to Forrester's Total Economic Impact study, companies that shift some or all of their assets to Azure's infrastructure-as-a-service (IaaS) offering could see a five-year **ROI of 435%**. Companies that don't effectively migrate their assets could struggle to realize the gains presented by the cloud.

Deliverables:

- ▶ Server assessment
- ▶ Database assessment
- ▶ Migration plan
- ▶ Cloud Readiness training
- ▶ Deployed Landing Zone
- ▶ Validated migration of assets
- ▶ Post-migration support options

KiZAN can have assets migrated in a matter of hours, but will work with you to identify timelines that make sense for your organization to be able to successfully support the assets in the cloud long-term.
