Data Platform *In 30 Days*

To help organizations harness the power of their data, Microsoft offers the Azure DPi30 Engagement. This program is designed to provide guidance, education, and hands-on support as you move data workloads into Azure.

Many organizations struggle with disparate or noncentralized data sources, outdated data platforms, and lack of access to data insights.

In this Engagement, Microsoft and KiZAN will conduct a design workshop to help your organization identify up to 3 scenarios, create a reference architecture design, implement a landing zone, and modernize the data estate using Azure Data Services (ADS).

In just 30 days, you will receive a hands-on consulting engagement providing architecture design recommendations for your data estate in Azure and deploy an ADS environment.

Deliverables:
Four Phased Approach

1. Workshop and Customer Use Case/Scope definition, Azure & ADS fundamentals.

2. Deploy Landing Zone and Azure Data Services to support the Customer Use Case.

3. Deliverable and environment handover to Customer.

4. KiZAN owned post-sales support and partner offer.

Activities:
▶ Analysis & Design Workshop
▶ Landing Zone Deployment
▶ Data Platform Transition
▶ Certified Partner Experience
▶ Dedicated Microsoft Support

| Design Workshop / Service and Architecture Recommendations 1-2 Days | Landing Zone + ADS Deployed to support Scenarios 3 Weeks | Handover of Data Platform to Customer 1-2 Days | KiZAN Owned Support |
