MDR for Microsoft Sentinel + XDR
Implementation

Rapidly improve your security posture and protect against an evolving cyber threat landscape with Microsoft Sentinel and Microsoft 365 Defender.

IT Leadership and Management can struggle to ensure comprehensive 24/7 security operations in today's fast-paced threat landscape. Our Managed Detection and Response (MDR) services for Microsoft Sentinel and Microsoft 365 Defender can ease this burden and enable you to focus on supporting your broader business needs without missing and mitigating security threats.

Without MDR services, you are not benefiting from the full capabilities of your Microsoft security stack and could be vulnerable to IT services compromise and data theft.

Within days of beginning the onboarding process, your organization will see benefits from having a trusted and capable MDR provider, and these benefits will grow as onboarding is completed and steady-state execution begins. These services can be executed remotely and ensure a rapid ROI from initiation.

Focus on supporting your broader business needs without missing and mitigating security threats.

Deliverables

▶ 24/7 Monitoring and Investigation

▶ Proactive Alert Tuning

▶ Real-time Threat Intelligence Enrichment

▶ ITSM Ticketing Integration

▶ Dedicated Customer Portal
