Windows 365 Accelerator

Accelerate the design, deployment, and ongoing management processes of Windows 365 to rapidly benefit from the capabilities and security Windows 365 can bring to your organization.

Windows 365 is a simple, secure, repeatable solution for ensuring your business can work anywhere from any device without the hurdles of legacy VDI solutions. By using Windows 365 you can enable users to be productive regardless of their physical device and its inherent limitations.

The benefits of leveraging Windows 365 include:

- A highly secure, highly-available work-from-anywhere solution

- A streamlined management process removing multiple factors from consideration

- Simple, flexible cloud service optimizing usage and financial concerns

KiZAN will assist your organization with designing and implementing your Windows 365 solution to ensure you benefit from the simplicity and security benefits inherent to the service. Education, planning, design, implementation, and initial pilot deployment are all included in this effort with the primary focus being a solid foundation upon which you can expand the solution to its full production potential.

Windows 365 Accelerator Deliverables:

▶ Complete a Windows 365 overview and planning session

▶ Generate a design and implement a baseline solution with a single core catalog image, up to 5 applications provided via Intune or Configuration Manager via Co-management, and core security and management configurations

▶ Perform a pilot validation of the Windows 365 solution (up to 50 users) using either Intune or Microsoft Endpoint Configuration Manager via Co-Management

▶ Create documentation of the solution as deployed and configured for the Pilot

NOTE: Windows 365 requires a monthly automatic renewal subscription cost per Cloud PC in addition to existing Microsoft 365 licenses.
