KMD EnergyKey

Complete toolbox for energy management of large organizations

KMD

An NEC Company

Complete toolbox for energy management of large organizations

_ An overview of the total energy consumption: Who is the user? And how much energy is used for what and when?

_ An analysis tool that reveals which activities and investments give the biggest energy savings

_ Nudging: Info screens and web solutions, which provide information about the company's energy consumption, etc.

What is KMD EnergyKey?
KMD EnergyKey is an IT solution that gathers and quality assures energy data from more than 50 different data sources, e.g. IoT units, FM, CTS and BMS systems.

Among other things, KMD EnergyKey calculates energy consumption, historical data and budget variations. Furthermore, it presents the results in an easily understandable context as required by the user.

KMD EnergyKey is an open IT solution which supports energy data to be exchanged and included in analytical work in decentralized Business Intelligence solutions.

This is why customers choose KMD EnergyKey

_ KMD EnergyKey can collect and utilize data from all relevant data sources in one overall solution.

_ KMD EnergyKey provides both an overview and detailed insight into energy consumption and impact on the climate.

_ KMD EnergyKey supports communication of the company's CSR strategy through focus on energy and climate KPIs.

_ KMD EnergyKey is a future-proof and scalable standard solution based on Microsoft Azure.
