

Accelerate your sustainable transformation

About Microsoft Sustainability Manager – one-hour free demo:

With new legislative demands on emission data collection and reporting, Microsoft Sustainability Manager enables you to record, report, and reduce your environmental impact through data intelligence.

What we offer

Microsoft Sustainability Manager will help you break down data silos and gain visibility into the emissions activities of your entire enterprise and value chain and reliably report your impact and progress.

During a one-hour free consultation, we will introduce you to the Microsoft Sustainability Manager and what possibilities as well as benefits the solution has to offer for your organization.

At Knowit, we will help you define, implement and manage Microsoft Cloud for Sustainability across your organization. Our team of Azure & Microsoft 365 technology adoption specialists and technical architects work closely with Knowit's digital sustainability strategists to accelerate your sustainable transformation.

Workshop output

This workshop will provide you with an overview of Microsoft Sustainability Manager functionality, architecture, and process flow and an update to Microsoft Cloud for Sustainability, and what to expect in the future.
