Microsoft Dynamics 365 Business Central workshop

We invite you to a two-hour, cost-free workshop customized to your starting point. At the workshop we will review your current solution. The modules and processes in use will be natural discussion points, aiming to outline how these aspects could look like in Business Central.

Why Business Central?

When choosing Dynamics 365 Business Central (formerly Navision and Dynamics NAV), you opt for a modern and future-oriented ERP solution.

Business Central is a comprehensive ERP system that can be quickly implemented and configured.

Customers can initiate their usage swiftly, particularly when the solution is delivered via cloud deployment.

Business Central is closely integrated into Microsoft's extensive ecosystem, enhancing its functionality through the use of Office, Power Platform, and Al capabilities.

What we offer

Tailored mapping session together with Knowit

Two-hour, cost-free workshop customized to your starting point.

At the workshop we will review your current solution to map out its complexity. The modules and processes in use will be natural discussion points, aiming to outline how these aspects could look like in Business Central.

In order to prepare the tailored mapping session to your needs, we collect the required data in advance by sending out a questionnaire for you.

The report from the workshop will naturally become your property and will include our recommendation for the way forward.

Workshop programme

1. Complexity Mapping

Explore the current solution by examining key parameters such as the number of users, database size, and future operational plans. Identify potential challenges and opportunities for improvements in the current system structure.

2. Process Analysis

Examine current business modules and workflows and any integrations and customizations to identify optimal implementation.

3. Needs Assessment

Discuss specific organizational requirements for customized solutions.

/ Our approach

Next steps after the workshop

Step	Preliminary project			Implementation project			Continuous improvement	
Content	1.0 ^{1.}	Conducted through working meetings within each process area. The meetings combine observation and interviews, where process owners from the client- side share information about the current situation in the system landscape.			Working on the setup of various modules in Business Central. We utilize our in-house developed 'RI- Hub' concept, where we have consolidated all our experience and expertise.		ر بر ب	We offer a programme for continuous improvement after the completion of the implementation project.
	Ö	The preliminary project identifies challenges in current processes. This approach uncovers key areas for future implementation by assessing the current situation and establishing requirements for a new solution.			This provides a pre-configured and pre-documented solution with ready-made delivery models.		$\mathbf{\tilde{\mathbf{b}}}$	The programme is a service agreement where the customer and supplier jointly agree on the services to be included, and determine prices accordingly based on the selected services.
					Collaboration and close dialogue with the customer are crucial throughout the implementation project.		$\boxed{\bigcirc}$	The basic services in the programme include a single point of contact, monthly follow-up on support requests, and maintenance of expertise. In addition to this, a variety of additional services are offered, allowing the service agreement to be tailored to the customer's needs and preferences.
	る で し	The working meetings follow a fixed structure, with preparations made by both the customer and the supplier ahead of the meeting.			Naturally, we help with initiation support and training to ensure a smooth transition to Business Central for the client's users.
