

Your New Intelligence Suite

In today's contested information environment, intelligence professionals face an impossible task: manually monitoring exploding volumes of data across fragmented platforms while threats evolve in real-time. Koat transforms this paradigm.

Our AI-native OSINT platform delivers military-grade intelligence capabilities to public sector organizations, consolidating previously disconnected datasets into a unified platform with unmatched speed and clarity. By automatically detecting disinformation, quantifying sentiment, and identifying coordinated campaigns across social, traditional, and fringe media sources, Koat eliminates 70-90% of the time analysts typically spend on manual data collection.

Where traditional tools deliver yesterday's intelligence tomorrow, Koat provides real-time awareness within seconds. Our advanced capabilities, including proprietary bot detection, hypergranular analytics (-100 to +100 sentiment scoring), voice-to-text transcription, and optical character recognition enable organizations to detect threats 150% more effectively while processing 333% more data volume than conventional platforms.

The result isn't just faster intelligence, it's fundamentally better intelligence. By automating the labor-intensive aspects of OSINT, Koat transforms analysts from information gatherers into strategic advisors, delivering auditable, evidence-based insights that empower decision-makers across defense, intelligence, law enforcement, and civilian agencies to maintain decisive advantage in an increasingly complex information battlespace.

Current Challenges Facing Information Analysts

Today's intelligence professionals are fighting an uphill battle against an increasingly complex information environment:

Disconnected Datasets – Critical intelligence scattered across incompatible platforms and siloed systems

Overwhelming Data Volume – Excessive noise making it impossible to identify meaningful signals manually

Rapid Narrative Evolution – Threats and issues emerging faster than traditional analysis can track them

Limited Analytical Capability – Current tools failing to simultaneously highlight trends and detect critical outliers

Authentication Difficulties – Inability to distinguish between organic conversations and coordinated inauthentic behavior

Manual Processing Bottlenecks – Analysts spending 70-90% of time collecting and organizing data instead of analyzing it

Multi-Modal Blind Spots – Text-focused tools missing critical intelligence in images, audio, and video content

The Koat Solution

Intelligence Dashboard

A customizable platform with metrics that matter

A scalable intelligence hub delivering hypergranular analytics and KPIs tailored to your organization's needs. Monitor granular sentiment (-100 to +100), quantify 11 distinct emotions, track trust scores, measure engagement, and understand reach all in real-time. Our dashboard separates organic users from media and manipulation, giving you unprecedented visibility across all major platforms within 10 seconds of content appearing. Key features include the following:

- Comprehensive metrics with advanced search capabilities (Boolean, Regex, Fuzzy Logic)
- Unlimited filter creation and CSV export functionality
- Cross-lingual aggregation and analysis capabilities
- Powerful API integration capabilities

Smart Reports

From Manual Monitoring to Automated Intelligence

Transform your workflow from hours of manual reading, aggregating, and summarizing to instant, automated intelligence briefs. Smart Reports eliminates tedious data collection across platforms, including TikTok, LinkedIn, and Reddit, by automatically detecting, categorizing, summarizing, and prioritizing conversations that matter. Key features include the following:

- Delivered directly to stakeholders via email, Slack, or webhook
- Key emotional drivers and comparative metrics to track daily trends
- Segmented summaries by user type (Organic, Media, Fake accounts)

Smart Alerts

Threats Don't Sleep. Neither Do We.

Never miss a critical signal or emerging issue again. Koat's Smart Alerts vigilantly monitor your digital landscape 24/7, instantly notifying you when narratives shift, sentiment plummets, or coordinated campaigns emerge. When every second counts, our AI-driven alerts deliver the context you need, identifying not just that something happened, but why it matters and what's driving it. Key features include the following:

- Instant alerts via email or Slack on shifts in sentiment, emotion, engagement, and impressions
- Comprehensive conversation summaries and sources of all data included with alerts
- ML algorithms learn the ebbs and flows of engagement, sentiment, and emotion around your keywords, and identify real-time deviations in those forecasted metrics

Scout

Conversation Beats Configuration.

Stop wrestling with complex dashboard filters. Koat's Scout capability lets you use natural language to filter immense volumes of data by simply asking Scout, "What narratives are emerging about our CEO?" or "Show me potential coordinated attacks on our brand." With Scout, you capture immediate, evidence-based answers drawn from LinkedIn, Twitter, Instagram, Reddit, TikTok, and 20,000+ news sources, all without AI hallucinations. Key features include the following:

- Generative AI-powered tool that speaks directly to your live and enriched data
- Provides direct links to sources and raw data used for insights
- Siloed and private, answers are never used to train LLMs

Koat Supports:

Crisis Response & Emergency Management

Real-time situational awareness during natural disasters and security incidents

Disinformation & Fake Influence Detection

Identification of coordinated campaigns and manipulation targeting institutions

Insider Threat Monitoring

Behavioral anomaly detection across open-source intelligence

Civil Unrest & Public Safety

Early warning indicators via real-time social media intelligence and community highly granular engagement metrics

Executive Protection

Comprehensive threat intelligence to safeguard leadership across digital channels against digital and physical risks

Law Enforcement & Intelligence Operations

Accelerated evidence gathering with comprehensive source documentation and auditable intelligence trails to support investigations and prosecutions

Message Effectiveness Measurement

Track narrative evolution across multiple digital networks simultaneously and with Quantifiable metrics on friendly and adversarial messaging performance

www.koat.ai

Real World Outcomes

75%-90% reduction in analysis time and manual data aggregation.

150% increase in threat detection coverage.

333% more data volume for key topic monitoring compared to traditional tools.

Koat transforms information environment intelligence from a resource-intensive challenge into a decisive advantage for public sector, national security, law enforcement, and military operations enabling faster, more informed decision-making in an increasingly contested information space.
