TANI | Customer 360 Analytics

Azure Blob Storage

Azure ML Studio

With the data in the blob storage models are trained in Azure ML Studio and they are deployed as web services

Microsoft Customer Insights

Customer DWH

Data in the predefined data model is sent directly to the Platform

For the model training purposes the same data is sent to Azure Blob Storage of the customer

Model web services are triggered by Customer Insights and with the model data all measures and segments are created automatically within the Platform
