

Migrate File Data and Cut Cloud Costs with Microsoft Azure and Komprise

Data is growing exponentially, while budgets stay flat. Komprise Intelligent Data Management helps you find and migrate the right file data to Microsoft Azure and cut 80% of cloud costs with transparent tiering and cloud data management.

Analyze and Plan Cloud Data Migrations

Komprise analyzes any NFS, SMB, S3 storage to show you how data is growing, how its being used, what's hot, what's cold, and how much you will save with Azure.

Migrate File Data Fast to Azure Files and Blob

Komprise migrates file data 27 times faster than other solutions, and ensures reliability with full MD5 checksums and reporting.

Tier Data in Azure to Reduce costs by 70%

Komprise transparently tiers data to cut 70% costs and puts the right data on Azure Blob and Files. You can also tier cold data from your datacenters to Azure using Komprise.

Zero disruption with Transparent Tiering

Now you can leverage the cloud without any data access disruption for users or applications. Komprise transparently tiers files, so they appear where and how they always have, even though they're now stored as objects. In addition, Komprise leaves the active data and control paths unchanged, so access to hot data is unaffected.

No stubs, agents, or vendor lock-in

Komprise manages data across your storage without the use of stubs or agents, which add complexity and create vendor lock-in. Instead, Komprise uses open protocols, such as NFS, SMB/CIFS, and REST/S3, so you stay in control of your data when it's moved across storage solutions.

Key Benefits

Visibility Across Storage

See your data usage and growth across your storage, and project your savings with Azure.

Optimize Storage Investment

Cut costs by 70%+ on every TB moved to Azure, and extend your existing storage.

No User Access Disruption

Komprise transparently archives data, so users still see moved data as files, even though they are stored as objects in Azure.

No Stubs, Agents, or Lock-in

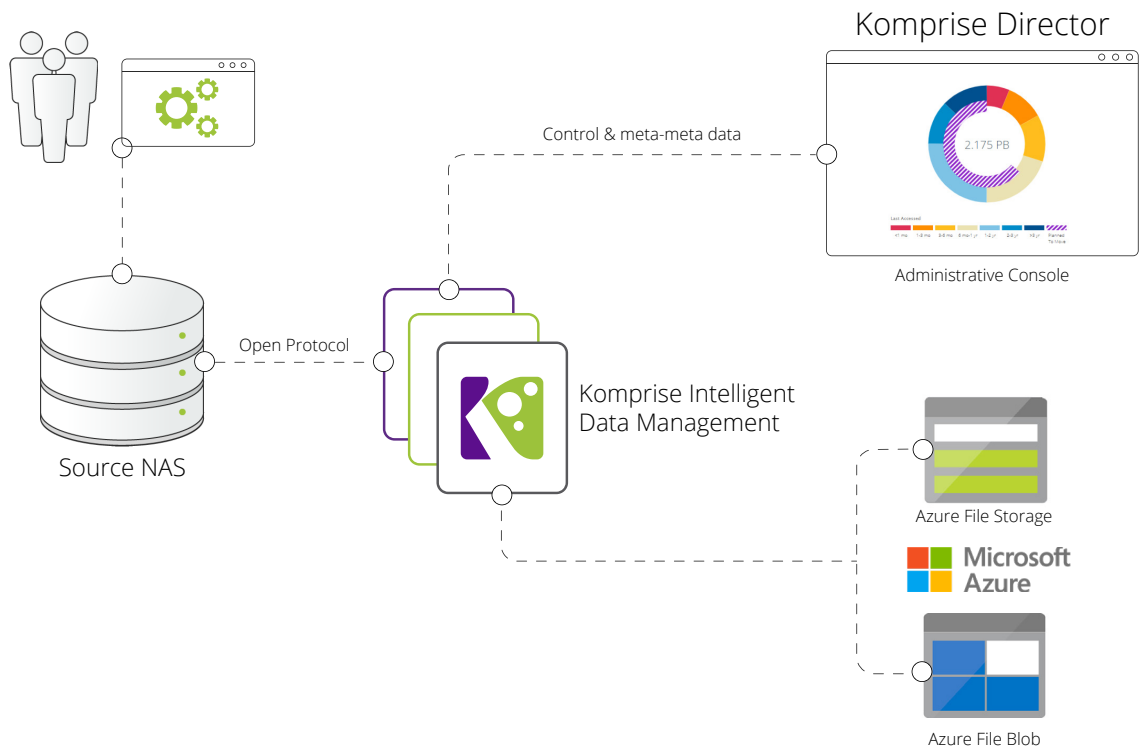

Komprise uses open standards, so you can use your data from your original storage or the cloud—without rehydration.

Optimize Cloud Costs

Komprise helps you maximize your savings with Azure by controlling how much data is retrieved, and how much stays in the cloud, for cost management without surprises or overruns.

Modern Architecture

Azure offers secure, scalable, durable, and low-cost solutions for data storage. Pair this with the Komprise scale-out, shared-nothing grid architecture, and you have a solution stack that grows on demand so you can handle today's massive scale of data. Komprise is built without bottlenecks, agents, stubs, or central servers that limit scalability or cause a single point of failure. As your data grows, simply add more virtual appliances to easily scale on demand.

Next Steps

Free Trial

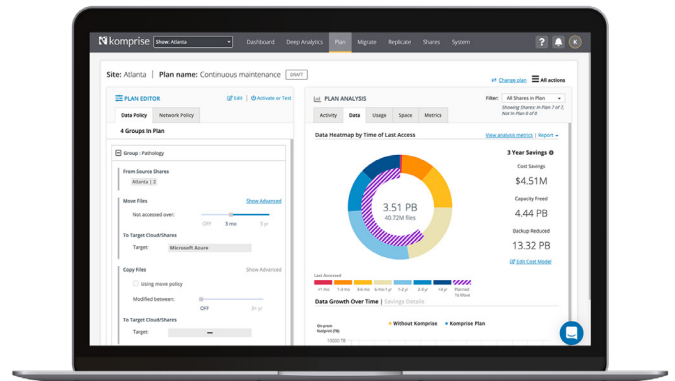

Sign up for a complimentary trial of Komprise in your own environment and see how much you can save by transparently archiving, replicating, and migrating the right data with Komprise.
