

AUTO CLASSIFIER

REVOLUTIONISE YOUR CONTENT MANAGEMENT

Revolutionise your
content
management
by **automatically**
classifying your
content

Overview

Increase productivity, improve search and remain compliant

Remove the unnecessary task of attributing your content with metadata, improve the accuracy of your metadata/keywords by training and making Auto Classifier aware of your organisational context, improve search and remain in compliance to regulatory requirements.

Extracts metadata and keywords based upon the semantic context of your content.

Improve search and the discovery of content by automatically tagging your content.

Increase the accuracy by training Auto Classifier **based on your organisation's data**

Usages

Understanding your content

Define a migration strategy by getting a complete view of your organisation's content. Auto Classifier can be ran across multiple repositories such as file-shares, network shares, SharePoint 2007 - SharePoint 2017 as well as SharePoint Online. See a holistic view of your organisation's content via a Power BI dashboard enabling you to refine and query the data.

Extract meaningful data from your content and view through an **easy to digest dashboard**

Improve operational efficiencies, streamline processes and **make informed decisions.**

Integrate with Microsoft 365's Compliance Centre and Azure Information Protection.

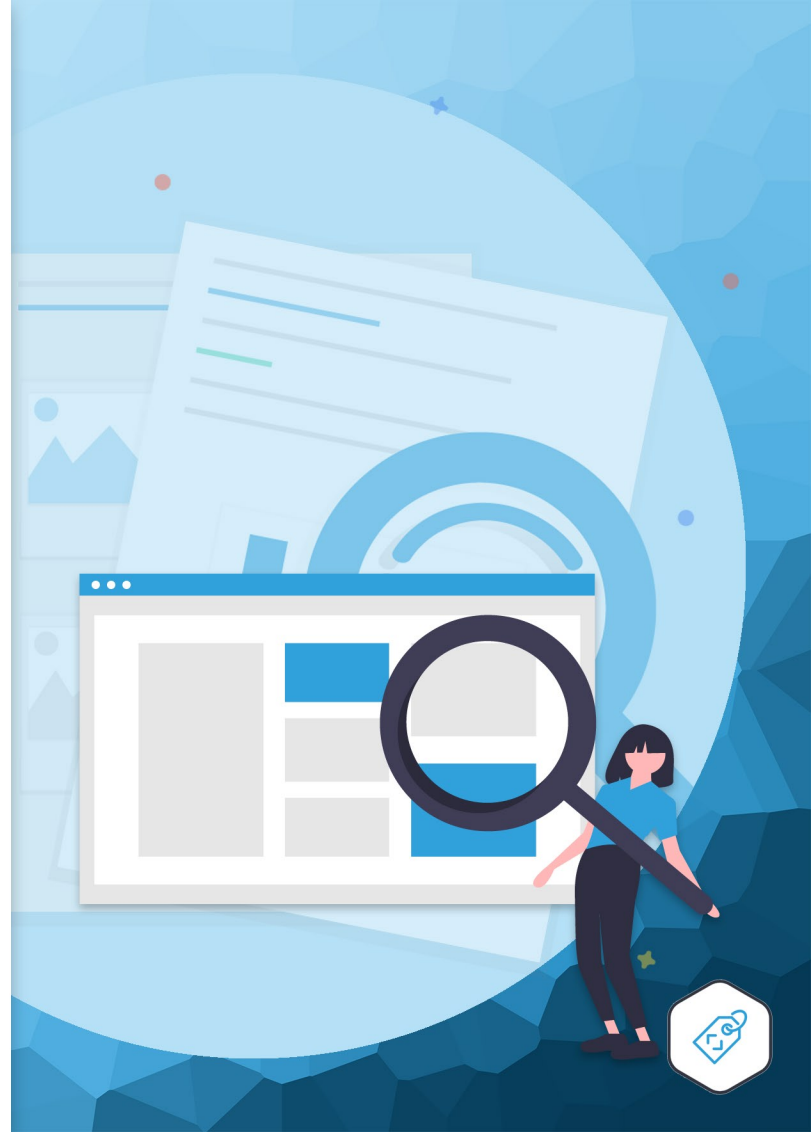

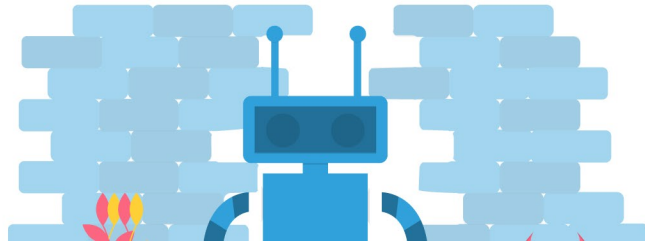

Data

Enhance your search experience

We often struggle to effectively connect with colleagues and to uncover the information we need to be immediately productive. Auto Classifier improves your organisation's search experience by automatically tagging your content and allowing your users to find content and reduce duplication.

Did you know that...

2.5 hours
On average, an employee will spend at least this much time per day finding information

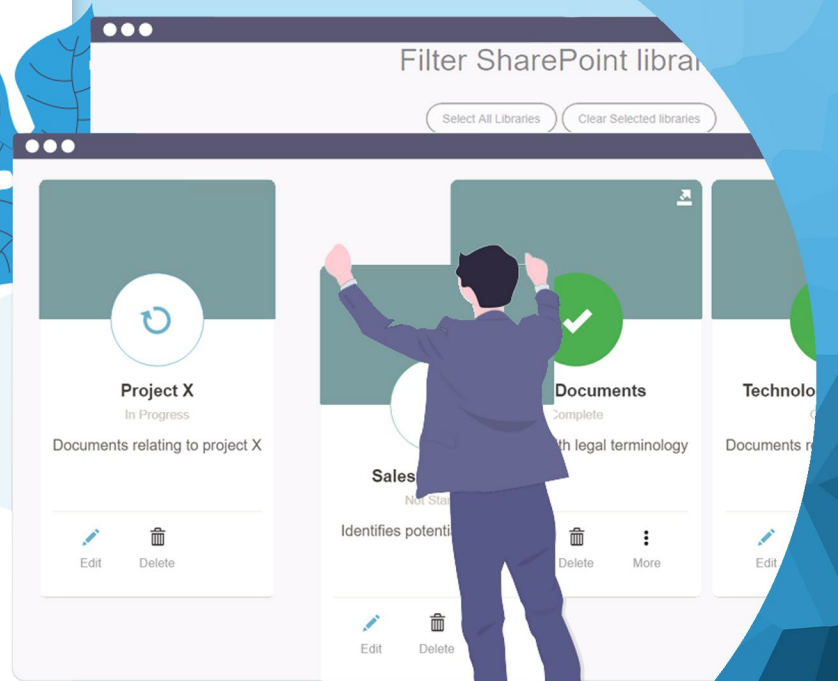

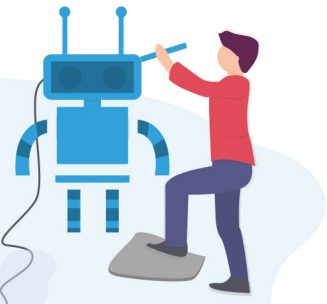

Data

Metadata

Use Auto Classifier to retrospectively tag your existing data on SharePoint (On-Premise or Online). Use Auto Classifier's intuitive interface to define your data repositories and train data models to become organisational aware.

Data Models

Improve the accuracy by training Auto Classifier against your organisational data and taxonomies. Use your existing taxonomies so that Auto Classifier can understand your organisation's terminology.

Usages

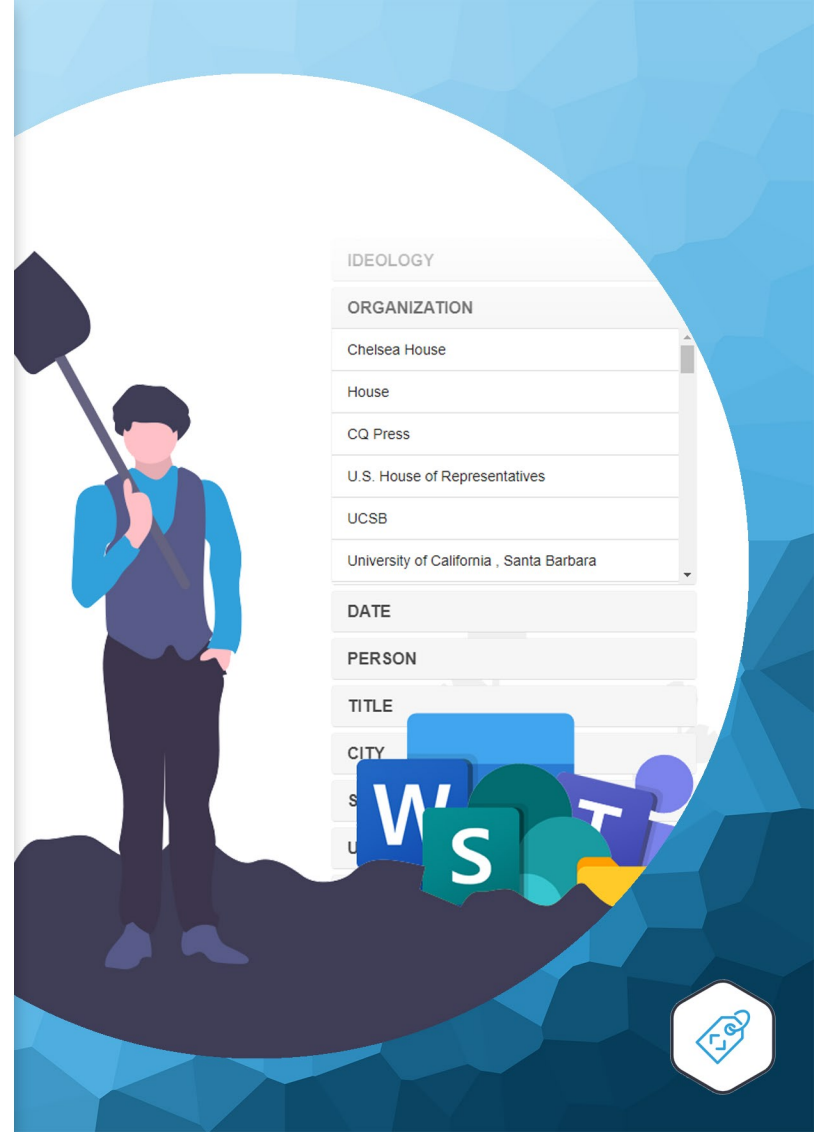

Understanding your content

Benefits

Increased end-user adoption

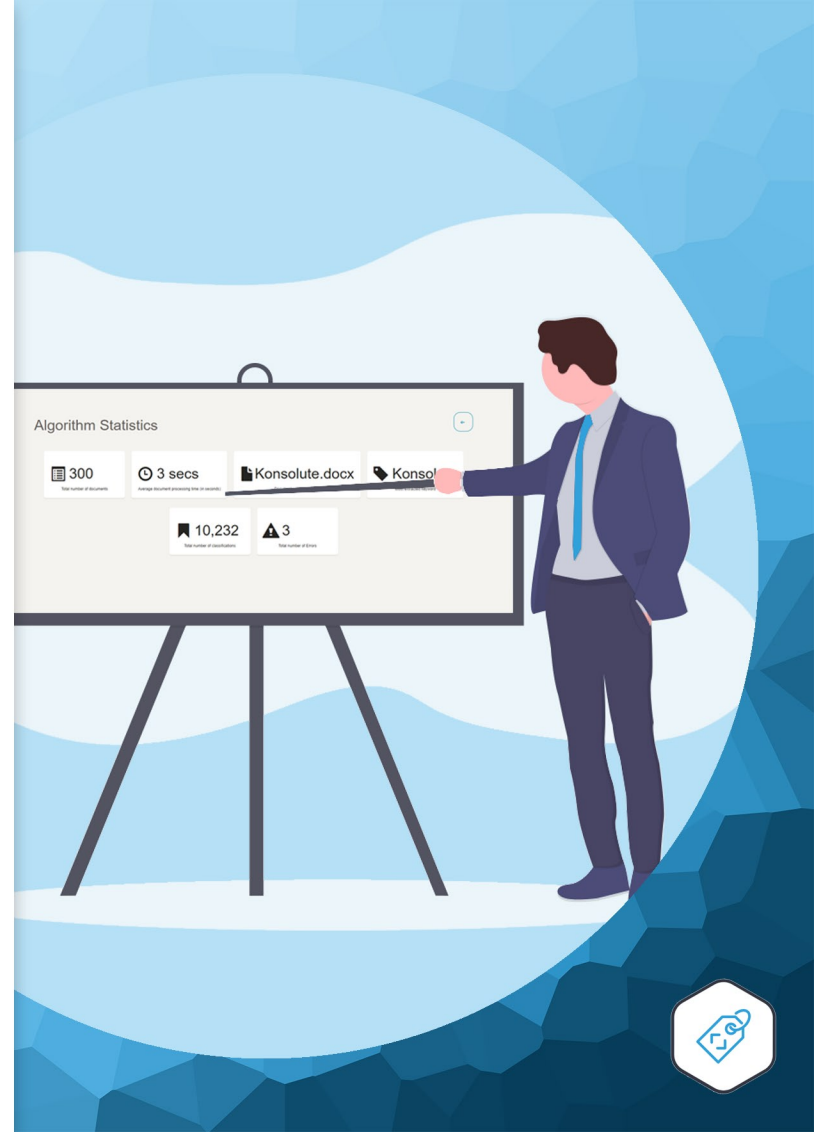

Auto Classifier has proven to increase user engagement and adoption by removing unnecessary tasks such as tagging their content. Auto Classifier improves search and Microsoft Delve experience and has shown to increase collaboration across organisations.

Seamless integration with Microsoft Teams

Auto Classifier works seamlessly in conjunction with your Microsoft Teams. Content Managers can now live a stress-free life knowing that Auto Classifier is automatically tagging your organisation's content.

Dashboard

Content Authors and administrators can use the Power BI dashboard to see how your organisation is creating and managing it's data. Run reports in relation to compliance and regulatory requests.

MICROSOFT 365 Support

Auto Classifier intelligently integrates with Microsoft Teams, SharePoint Online and your organisation's file shares so that your end-users do not need to classify their content.

Supported now

Microsoft Teams

Auto Classifier works in conjunction with Microsoft Teams to automatically extract and associate metadata to your content

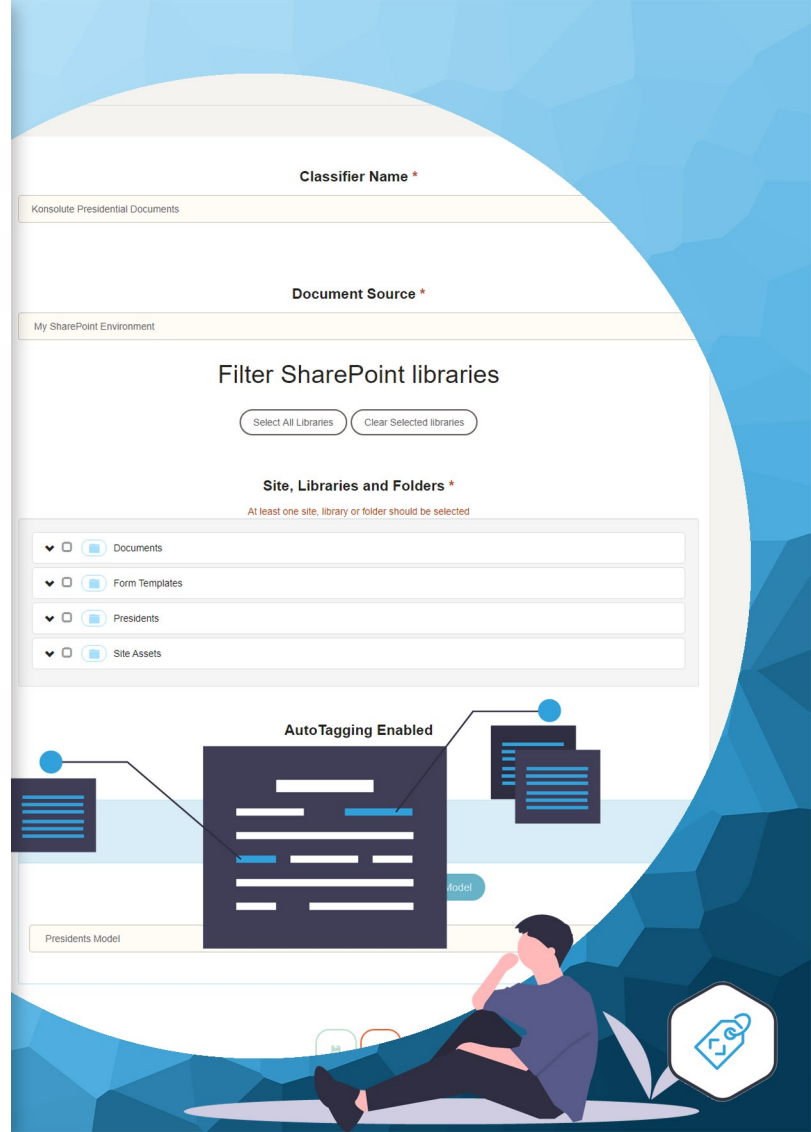

SharePoint Online

Auto Classifier works in conjunction with your existing Information Architecture and taxonomies. Enrich the pre-built models to increase accuracy

File Shares

Auto Classifier extracts and applies metadata to your internal content and allow for an easier refinement & search process in your document archives.
