# Data Discovery

Use Kolumbus to answer key questions and **identify data that you need to migrate across** and **archive and dispose of data** that is no longer required.

Kolumbus also **automatically identifies taxonomies** which you can use as part of your information architecture.

Our customers have used Kolumbus for numerous use cases such as:

Identify and define migration strategy

Using the data to make operational efficiencies

Respond to regulatory and compliance requests

Identify insider threats

The possibilities are endless...

Compliance & eDiscovery

Kolumbus uses **intelligent language processors** to identify content which may not be compliant **in accordance to your organisation's policies and procedures.**

Kolumbus can **respond to regulatory requests such as GDPR** and compliments **Microsoft 365 Compliance Centre** and **Azure Information Protection**

Capabilities

Kolumbus's dashboard utilises Microsoft's Power BI to provide you with a powerful toolset that you can use to define and query your data set.
Train data models using Kolumbus to recognise your organisation's content and improve the quality of keywords that are extracted. Kolumbus can **use your existing taxonomies** or use the out of the box model to recognise generic categories.

90%

Did you know that as much as 90% of data created is defined as unstructured data?

The inability to make sense of your data could be stifling your organisation's **opportunities, competitiveness, revenue** and **growth**
