

# DevOps rich Software Engineering

## Why DevOps?

Getting your product in your customer's hands can be intimidating to software delivery and a large risk factor for your stakeholders. A culture of DevOps facilitated by the infrastructure and tooling will best minimize any risk your team has with the return on your software investment.

### What can DevOps do for my software delivery?

Your team's ability to deliver predictably and consistently is crucial to understanding your business's costs, investments, and efficiencies. By implementing DevOps infrastructure and its best practices, you can enable your developers to focus on new product features while allowing your product owner to manage when/what is released to your end customers. Always Auditable and Always Shippable are the mantras, and DevOps is the path forward.

★ *To successfully implement continuous delivery, you need to change the culture of how an entire organization views software development efforts.*

~Tommy Tynjä

★ *DevOps adds the idea that small, cross-functional teams should own the entire delivery process from concept through user feedback and production monitoring.*

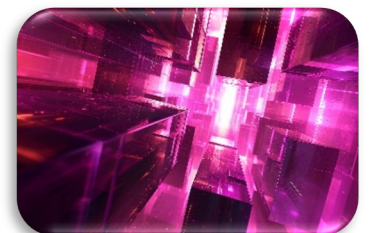

~ Mark Schwartz

### How is Kopius Helping Clients Integrate DevOps?

With the recent expansion of cloud-based platforms offered by Amazon, Google, and Microsoft, businesses now have unprecedented access to affordable infrastructure with out-of-the-box Monitoring and Security- this provides the perfect platform to integrate your software delivery process. At Kopius, we help our clients strategically incorporate these innovations to reveal business insights, open new opportunities for increased revenue, enhance industrial operations and safety, and improve customer satisfaction. Kopius works with our clients to determine the best, most efficient ways to deploy DevOps capabilities into their software delivery process. Always auditable and Always Shippable is the mantra, and DevOps is the path forward."

### Kopius. Building Potential. Together.

Kopius is a digital transformation solution provider focused on helping enterprise customers worldwide understand and apply next-generation technologies smartly and innovatively to advance their business goals.
