

Insights 360 > Solution Overview

Kopius Insights 360 is a modern, scalable end-to-end data platform backed by Azure Databricks and AI services. The platform provides a foundation that enables data engineering, data science, analytics & insights, and AI/ML capabilities.

Utilizing a modular architecture, off-the-shelf data connectors and pre-built Databricks notebooks, our flexible platform solution reduces complexity and allows you to begin warehousing your data and realizing results almost immediately.

Insights 360 Benefits

Designed and developed by using our vast experience helping customers migrate, modernize, and transform their data assets the Insights 360 platform delivers meaningful results, including:

- ✓ **Reduced deployment time**
Using pre-built notebooks and off-the-shelf data connectors, we see up to 50% less deployment time compared to traditional ETL data warehousing solutions.
- ✓ **Integration flexibility**
Simplifying the process of integrating common data sources and normalizing the data, Azure Databricks+Fivetran supports hundreds of "partner connect" endpoints in addition to several native integrations.
- ✓ **Data governance**
Ensuring your data is safe and reliable by implementing appropriate access and governance using services such as Azure Purview and Unity Catalog.
- ✓ **Native AI/ML Support**
Enabling support for common AI/ML use cases by leveraging Azure OpenAI, Azure ML, and Azure AI Studio.
- ✓ **Reduced cost**
Eliminating traditional high-cost ETL components (Extract, Transform, Load), such as dedicated SQL servers and custom data integration development, results in an overall cost reduction.
- ✓ **Modular architecture**
Onboarding or migrating existing data sources and systems with minimal disruption to current operations is made easy through Insights 360 modular design.
- ✓ **Developer support**
Supporting multiple languages, Azure Databricks enables development and data processing in Python, SQL, Scala, and R.
- ✓ **Generative AI Readiness**
Having structured and governed data allows your organization to innovate and deploy GenAI solutions quickly and easily.

Start your Data & AI journey through our [JumpStart Insights 360 program](#)

Data & AI Azure Services Offered

JumpStart Insights 360: Leverage design-thinking workshops and POCs to unlock insights and demonstrate the power of an intelligent data platform for every user.

IoT: Bring intelligence to physical products, operations, and experiences through connected devices, monitored data & analysis, and secure Azure IoT cloud-to-edge solutions.

Data & Analytics: Uncover business insights and operational efficiency with Azure Databricks and AI powered enterprise search and knowledge mining.

AI Solutions: Realize industry use cases through AI Designed Wins that integrate infrastructure, data platform, application, and AI layers.

Build & Modernize AI Apps: Extend beyond the desktop to impact every user by reinventing applications with AI, harnessing the insights and capabilities of your intelligent platform.

Security and Managed Services: Achieve advanced protection, compliance, and governance for data objectives alongside managed infrastructure services.

Technologies we implement or extend: Azure Databricks, Azure Storage, Azure Application Insights, Log Analytics, Monitor, Azure Synapse Analytics, Azure OpenAI, Azure ML, Azure AI Studio, Power BI

About us

Kopius is a performance-driven consulting partner with a track record of delivering digital products, custom business applications, and data & AI solutions. We pride ourselves on our 92% client retention rate and our partnerships with industry leaders.
