

AI for Recruiting Human-led. AI-powered.

A pre-built application that transforms talent acquisition by automating high-effort tasks like job description creation, candidate screening, and interview scheduling, while elevating every touchpoint of the candidate experience. Designed for enterprise hiring teams, it empowers enterprises to scale recruiting operations without scaling costs or complexity.

Reimagine Recruiting with AI

Capabilities

Enterprise search

Deliver personalized, context-aware answers using Agentic RAG that interprets intent and pulls from structured and unstructured recruiting data sources.

Agent platform

Build, deploy, and customize recruiting-specific AI agents from a unified enterprise platform that scales securely and delivers measurable hiring outcomes.

Intelligent Orchestrator

Automate multi-agent and multi-step recruiting workflows by dynamically routing tasks, selecting the right agents, and maintaining context throughout interactions.

Admin Controls

Manage security, access, compliance, and system behavior through centralized governance, including SSO, audit logging, and data masking.

Access channels

Engage with AI agents across web, mobile, Slack, Teams, Microsoft Copilot, and the AI for Work Assistant.

Voice-based candidate screening

Conduct intelligent, automated candidate screening through voice AI that evaluates responses, captures insights, and accelerates shortlisting at scale.

Why does it matter now?

Service demand keeps rising while resources stay flat

Automate the repetitive, high-volume requests that overburden your helpdesk and drain IT budgets.

Employee downtime is a cost center

Delayed resolutions hurt productivity; AI agents reduce time-to-resolution by solving issues instantly, 24/7.

Disjointed tech stacks slow operations

AI for Work | IT bridges disconnected tools and systems, driving seamless workflow execution without swivel-chair inefficiencies.

Scalability without trade-offs

Automate IT ops at scale while preserving control, security, and compliance.

AI isn't optional—it's now a competitive IT imperative

Drive measurable operational impact with a solution built for enterprise IT from the ground up.
