Advanced Threat & Organization Monitoring

ΛTOM

Pay as you grow

Build on Microsoft Azure OMS, any cloud, any platform, no limits, strong security.

Enterprise class services for everyone.

Sustainable IT

Knowledge, long-term IP, troubleshooting, understanding. Extends Microsoft functionality.

Extend your IT team with our knowledge.

Fulfill compliance

Compliance, regulations, industry standards. GDPR & ISO 27001.

Every country has some sort of security standard in place.

Complex things

Easy to understand. Machine Learning, Artificial Intelligence. Human brain behind the service.

Summary report every week.

Where the ATOM helps the most?

Current IT is dealing with more complex scenarios, often hybrid or on-premise and cloud. ATOM brings clear visibility across all systems and enables organizations to gain long-term IT sustainability. Connecting different "dots" (data sources) and almost real-time analysis in a single console allows to do the right decisions at right time.

Your business it not growing just because of IT?

Are you one of the organizations, which doesn't monitor an IT security? Or do you have too many tools to check? Do you understand what's going on in your environment? Do you have outsourced services under your supervision? Is your IT supporting your business needs? ATOM helps to answer these questions.

GDPR as well as ISO 27001 defines strict rules within cyber security.

ATOM provides visibility not only for security, but about all components of modern IT. Proactively informs business owners about potential breaches and operational issues.

Start receiving phone notifications about critical incidents today!

EU directive General Data Protection Regulation (GDPR) article 32, section 1, lit. b defines: Ability to ensure Integrity, Availability, Resilience, Confidentiality. ATOM provide continuous evaluation of

Integrity	Availability	Resilience	Confidentiality
• Service state change • Event management • Network traffic • End point login / access	• Network monitoring • Performance monitoring • Server availability • Health check lite	• Baseline comparison • Best practice evaluation • Service Map, relationship between services, processes and systems	• AD group check • Local group check • ATA and SIEM integration • E.g. DNS access / changes • File system access / attempt

Unique integration of SIEM and operations

- Focusing on organizational level, not just particular systems
- Combining Security and Operations perspective over all systems
- Phone notifications on critical events in your environment
- Single console for any data source, on-premise and cloud

Lack of certified IT experts?

- ATOM is built with best of breed knowledge of IT & security experts
- Service backed by the consultants if help needed to resolve the problem
- Knowledge and solution added every 2 weeks, continuous build

Build on Microsoft Azure

- Security certifications in the product
- No limits, any platform, any data source
