# Potential Challenges: Without Vulnerability Management Solution

Decentralized  
Vulnerability  
Management

Insufficient  
Incident  
Response

Lack of  
Automated  
Scheduling

Lack in Vendor  
Management

Higher  
Operational  
Cost

Lack of  
Comprehensive  
Security Posture

Limited  
Scalability

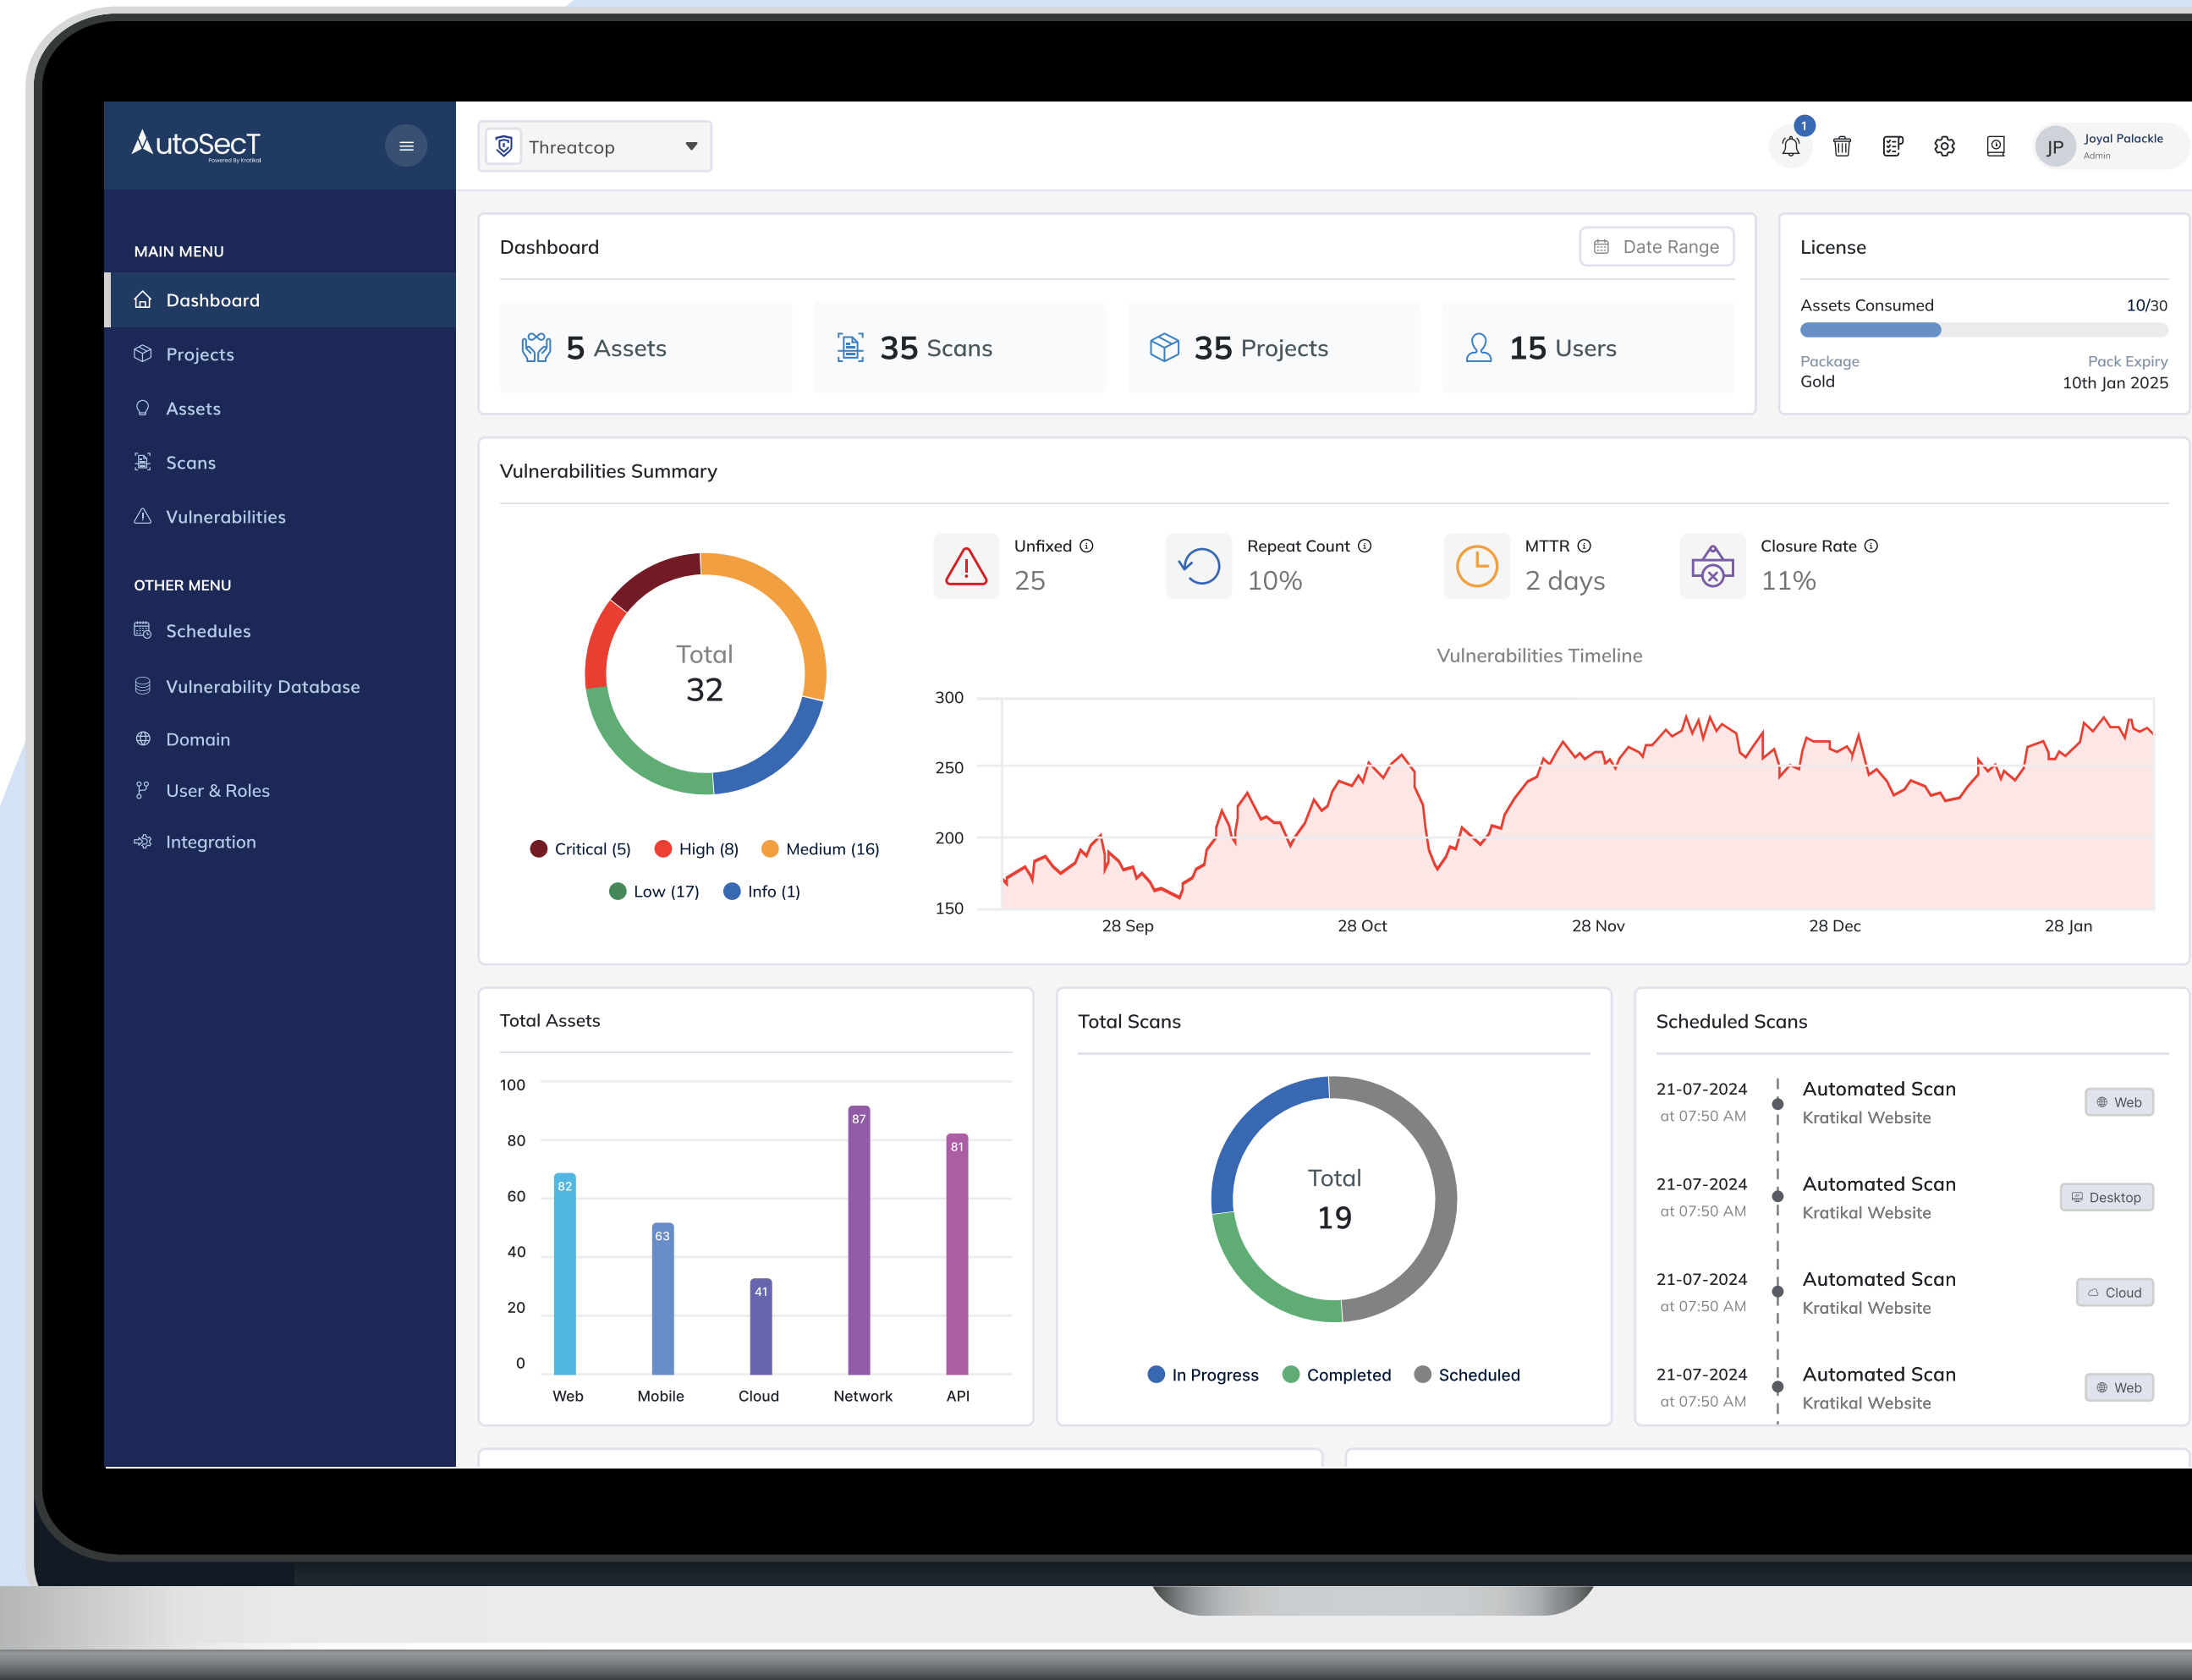

Inefficient  
Ticketing Platform  
Integration

Absence of  
Real-Time  
Dashboards

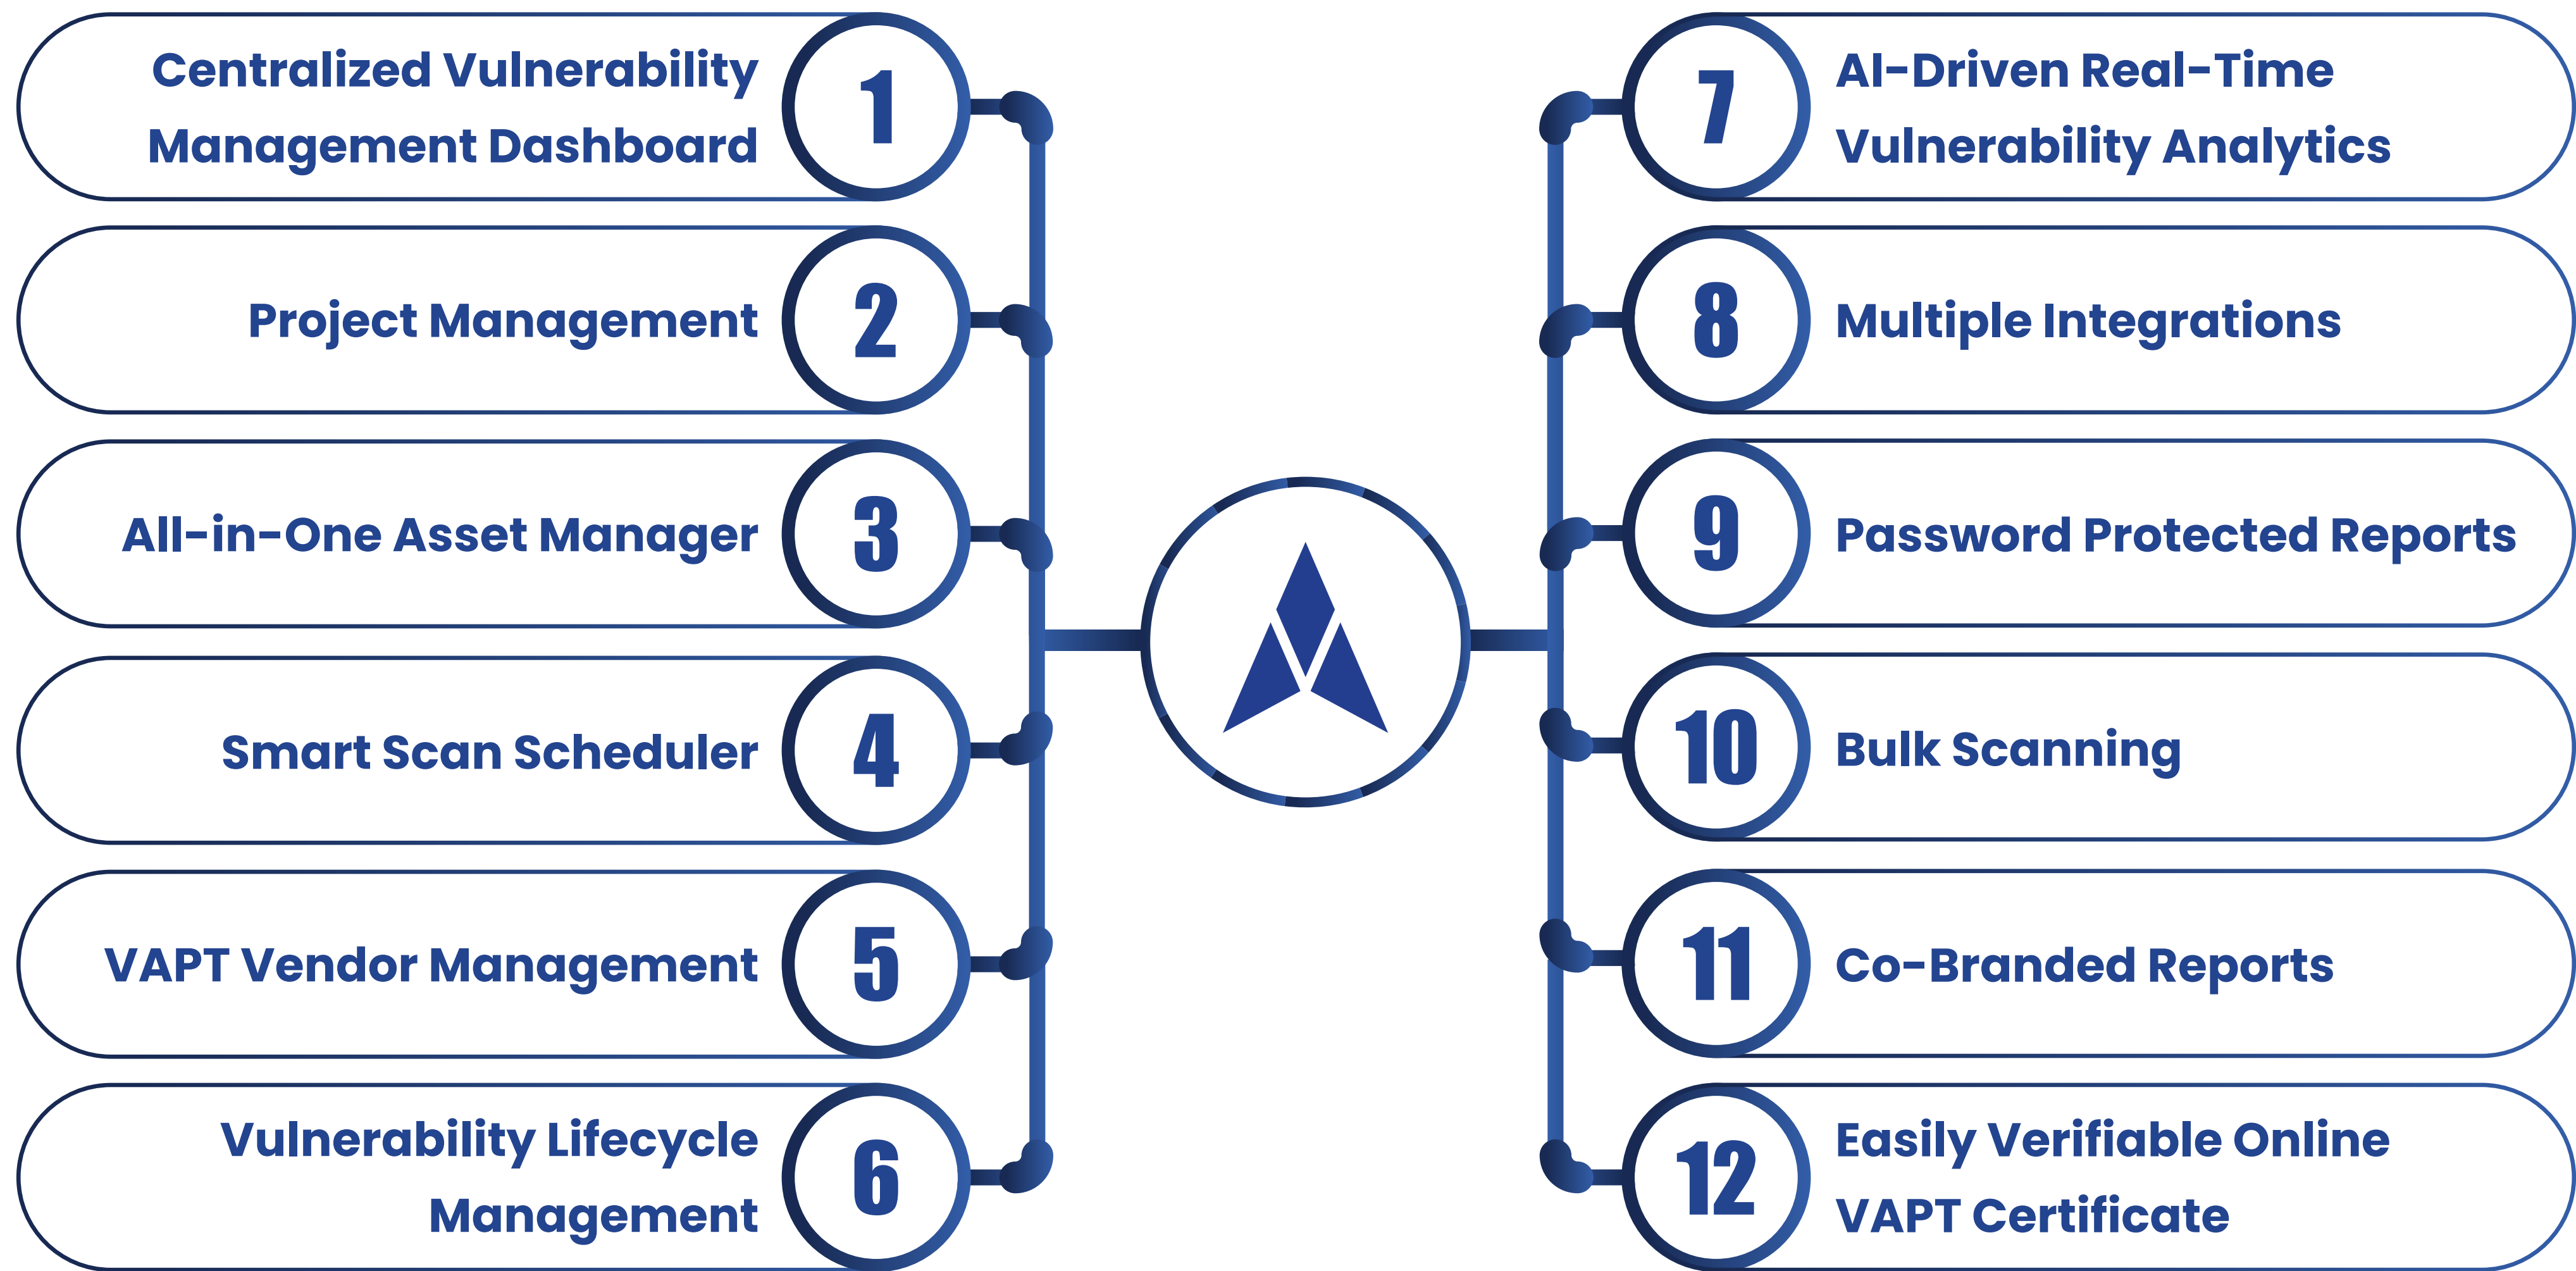

# Overview of AutoSecT

**AutoSecT** is a powerful, unified vulnerability management platform designed to help organizations identify, prioritize, and remediate security vulnerabilities across their entire environment—Web, Mobile, Cloud, and API. With AutoSecT, vulnerability management becomes simpler, faster, and more effective.

# Core Capabilities of AutoSecT

# How AutoSecT Works?

1  With just a few clicks, configure AutoSecT based on your security requirements.

2  Run automated scans across your entire environment, detecting vulnerabilities in real-time.

3  **Analyze**  
Receive detailed reports with prioritized risks, complete with recommended patches.

4  **Patch Recommendations**  
Mitigation suggestions can be exported on Jira, Slack, and Google Chat to mitigate the vulnerabilities.

# Performance Indicators

## Platforms Secured

**1150+**

Web

**750+**

Mobile

**2200+**

Cloud Assets

**6000+**

API

**25000+**

Network Assets

**1.2M+**

Vulnerabilities Identified Yearly

**12000+**
