

Legacy System Modernization

Legacy System Modernization – Transforming Enterprise App Effectively

Innovation made simple with effective IT modernization that boosts reliability, security, and improves customer experience.

Objective:

Leveraging today's customer-centric technologies like cloud, mobile computing, and cognitive technologies to digitally transform legacy systems. We modernize enterprise applications through the power of new IT to help clients get the agility, speed, and scalability to improve customer experiences as well as deliver better products and services.

What do we do?

- We modernize IT to provide data protection from edge to cloud, reduce unplanned downtime, faster data recovery, and lessen security breach.
- We offer data centre modernization service to drive efficiency and achieve more business outcome in less time, less money, and fewer resources.
- We simplify cloud migration, eliminate silos, and deliver consistent infrastructure experience to handle complex workloads.
- We provide timely assistance and practice technology-centric model, business-centric model, provide continuous application maintenance and improvements, analyse business value proposition to reduce technology, design, and roadmap risks.

How do we do?

We have certified modernization experts with domain expertise in making the legacy systems more agile and efficient with the use of artificial intelligence, machine learning, intelligent automation, cloud migration, cognitive technologies, specialized skills, and global delivery capabilities. We have a strategic partnership with Microsoft Azure coupled with tool-based approach, program management, organizational change, and holistic knowledge of management.

What do you get?

Choose a solution to see how application modernization can help you stay competitive and impact your organization revenue:

- Legacy app modernization
- Software-defined and cloud-enabled data protection
- Datacentre operations
- Custom cloud solutions and migration
- Networking and AI-driven transformation
- IT modernization consulting
- Application roll-out assessment
- Roadmap enterprise architecture/platform strategy assessment
- Enterprise app development using Java, Open Source Technologies and .Net.
