Technical Account Orchestration

Kudaw Engagement

Commercial Team

Commercial Team

Position Played

- Executive Sponsorship
- Azure Commercial Proposal
- Azure Sizing
- Azure Investment

Technical Team

Local

CSA – Cloud Solution Architect

Position Played

- Lead technical engagements
- Drives technical governance as customers leverage Azure.
- Help customer and partners in architecture design
- Drives MVPs and Architectural Design/Review sessions for production deployment with customers and partners.
- Managed discussions during Value Realization stages.

Objectives and Key Results:

- Remove Technical blockers
- Customer Satisfaction w/Technical Trust

CS – Customer Success

Position Played

- A leader within the account team. Oversee and ensure prioritized alignment of coordinated outcomes across Support Programs, Customer Success Engagements, and Consulting projects that drives consumption, supportability and operational health.

Objectives and Key Results:

- Customer Satisfaction
- Consumption Optimization

Regional (OnDemand)

Extended Technical Team

Position Played

- Specialist in specific Azure Services
- Direct connection with Engineering Teams

Objectives and Key Results:

- Deployment of specific workloads
- Product Roadmap
- Remove Product blockers

Azure Platform / Support

- ✓ Demonstrable experience
- ✓ Safety
- ✓ Solución End to End
- ✓ Regulation and Compliance
- ✓ Leading Gartner and Forrester
- ✓ Adoption, Training and Accompaniment
- ✓ Load portability

- Optimizing component deployment
- Global accessibility at any time
- Encourages the participation of development teams
- Allows you to scale horizontally and vertically in one click
- Offers End to End solutions (we can absorb data from multiple sources, manage it, maintain it and provide it for descriptive, predictive and prescriptive analytics)
- Promotes the governance and security of solutions (Azure Purview integration for data governance, reports, kpi, rules, tagging and all this integrated with PowerBi)
- Enables operational continuity (a single control point)
- Optimization of expenses and budgets (from less to more with known costs and the best cost/performance equation)
- Distributed and component architecture,
- Allows you to test the services

Regulation and Compliance

Microsoft Cloud services have the largest compliance portfolio in the industry

Industry

Azure Databricks is in a unique position to help you succeed

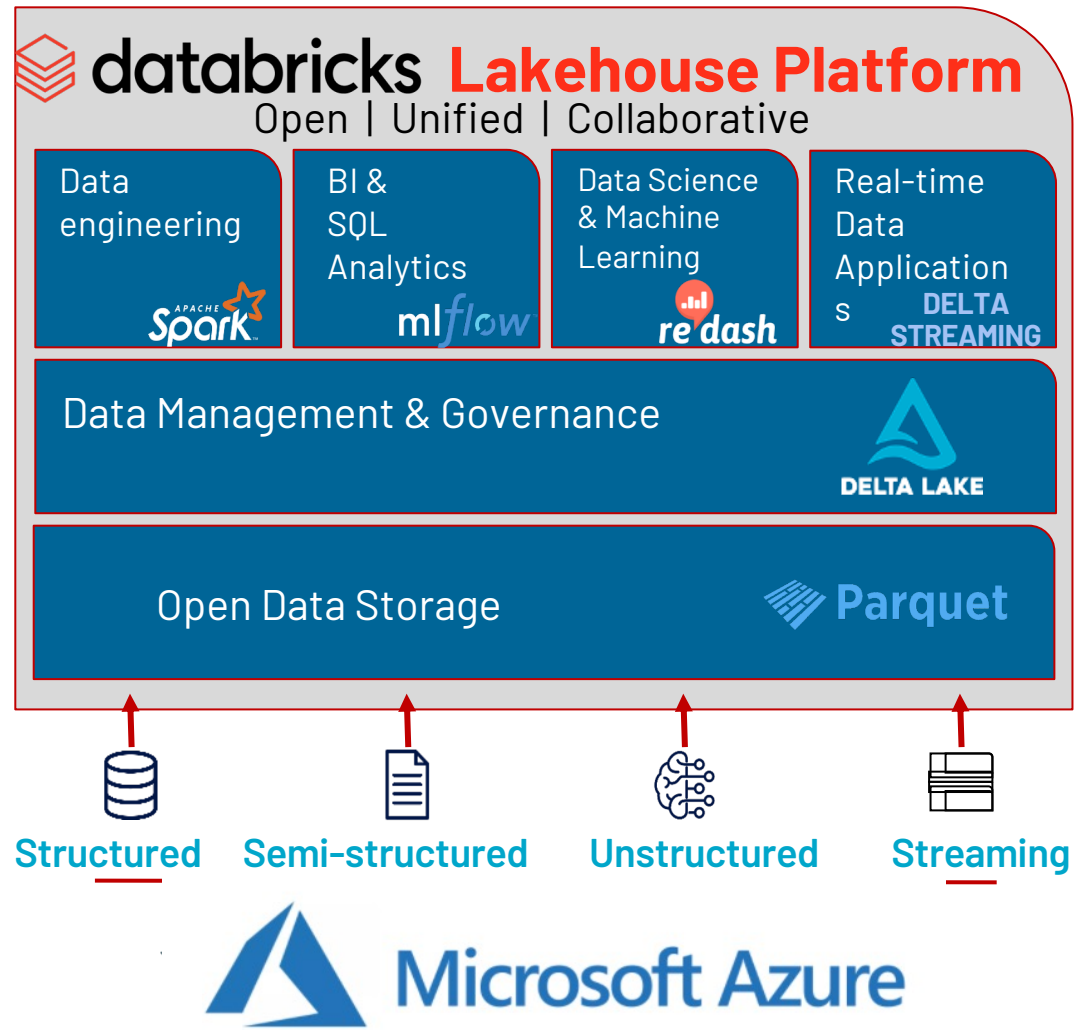

Solution

Challenges

- Slow pace of transformation and adoption
- Improve operations for speed, efficiency and expertise
- Limited prescriptive ideas

Azure Databricks solution

- Unified Platform for Data Processing:
 - Data Engineering
 - Data Science/ML
 - Business Intelligence
- Get rid of silos by allowing many teams to collaborate under a safe and curated scheme
- HR-free scale ML providing all the tools needed to move from exploration to deployment on a single platform

Nombre	Descripción
Modernize Risk Management	Traditional banks relying on on-premises infrastructure can no longer effectively manage risk. This solution helps FSIs adopt a more agile approach to risk management by unifying data and AI.
Data-driven ESG	ESG is widely considered a top-level initiative to achieve resilience and sustainable profitability in a rapidly evolving economic and environmental landscape. This solution provides companies and investors a holistic and data-driven view into ESG performance.
Fraud Prevention with Predictive Analytics	Curbing fraudulent or malicious behavior — from fraudulent securities trading to money laundering — is key to mitigating negative revenue impact. This solution provides ways to leverage data and machine learning to detect anomalies.
Credit Card Fraud with Geospatial Clustering	As consumers become more digitally engaged, large FSIs often have access to real-time GPS coordinates of every purchase made by their customers. In this solution centered around geospatial analytics, we show how the Databricks Lakehouse Platform enables organizations to better understand customers spending behaviors in terms of both who they are and how they bank.
Rule-based AI for Financial Fraud Detection	Preempt fraud with rule-based patterns and select ML algorithms for a successful and reliable fraud detection program, including anomaly detection and fraud prediction to respond to bad actors quickly.
Alternative Data for Investing	Make better investment decisions by revealing valuable insights about trends, behaviors and risks. Alternative data extends across a variety of use cases, including back-testing, market risk and ESG investing.
Personalization	Enrich transactions with contextual information (brand, category) that can be leveraged for downstream uses such as customer segmentation or fraud prevention.

Data AI: Azure SQL Database Essentials

WorkshopPLUS

Duration: 3 Days [Remote / Onsite]
Difficulty Level: 200 - Intermediate

Description
This offering is designed to provide knowledge and tools to understand the usage of cloud databases. You will explore Azure SQL Database concepts, including how to create, manage, monitor, and troubleshoot a Database solution.

Objectives

- Review different purchase models for compute and hardware generation
- Discuss the vertical and horizontal scaling options
- Learn how to monitor, troubleshoot issues and review migration methods
- Examine the administration, maintenance, recovery options, security and compliance

Outcomes

- Move an SQL workload to Azure SQL Database and manage the workload

Data AI: Azure Synapse SQL Pool Essentials

WorkshopPLUS

Duration: 3 Days [Remote / Onsite]
Difficulty Level: 300 - Advanced

Description
This offering presents how you can monitor, administer, optimize, and operate an Azure Synapse SQL Pool. It will examine how the SQL analytics platform allows you to scale the compute and storage elastically independently with a massively parallel processing architecture. You will also study how Azure Synapse Analytics is a limitless analytics service that enables enterprise-grade data warehousing with Business Intelligence (BI) and Analytics.

Objectives

- Learn Massive Parallel Processing basics
- Understand Synapse SQL Pool Architecture, Clients, and Tools
- Load data into Synapse SQL Pool
- Review security, storage, elasticity, scaling, and best practices for these

Outcomes

- Move an Azure SQL Synapse SQL Pool and manage the workload

Data AI: Data Analytics with Python

WorkshopPLUS

Duration: 3 days | Focus Area: Business/IT Alignment | Level: 300

This course will provide you the knowledge and tools necessary to understand the capabilities and usage of Python for Data Analytics. It shows how to work on end-to-end data science projects including data analysis and visualization by analyzing various datasets and building predictive outcomes using various Python libraries.

It also explains building machine learning model with Python, common machine learning algorithms in Python and executing Python code with Azure Machine Learning, Spark and HDInsight cluster. This workshop is targeted at Analysts, Business Analytics Developers, and Data Engineers.

OUTCOMES

Skills
Gain a comprehensive understanding of the features and capabilities of Python, Microsoft Products with Python and common machine learning algorithms

Best Practices
Experience on how to train, evaluate and consume predictive machine learning models on various samples, even on a real life scenario

Way Forward
Take what you've learned in the classroom and apply it to resolve real problems at the workplace

PREREQUISITES
Participants that have existing experience performing business analytics will receive the most value from this course.

Recommended Qualifications

- Some basic knowledge of Python
- Some familiarity with machine learning concepts and predictive modelling

Hardware Requirements

- An Intel Core-i5-based PC
- 4 GB RAM
- 128 GB HDD
- Windows 7 SP1 or later
- Office 2013 Professional Plus
- Internet access with at least 1 Mbps bandwidth per student

Architecture

Components

Integration Runtime Self-hosted

Component responsible for providing data integration capabilities from different network environments. Work in conjunction with Synapse Pipelines to obtain on-prem data and send it to the Cloud environment

Data lake Storage

Massive data storage service. In it will reside all the historical and current data of the solution.

Synapse Pipelines (Data Factory)

Component responsible for orchestrating data copy flows between on-prem and cloud environments. It will relate directly to Integration Runtime Self-hosted.

Synapse SQL

Service that will allow you to query data stored in Azure Data Lake Storage using the same capabilities of a SQL engine, even making use of SQL.

Azure Databricks

Data processing platform. It will be the main compute component, where current and new processes will run.

Service that will allow you to build and publish dashboards, visual reports, making use of the data and computing power of the solution.

Components

Network Security Group

Service that allows you to filter and restrict internal networks and communications between different Azure resources. Rules that allow or deny network traffic between the various resources in the solution will be used.

Azure Policy

Service that allows to apply the standards of the organization and to evaluate its compliance. In this service, the necessary policies will be defined for the correct use of the solution and Azure resources.

Azure AD

Microsoft's cloud-based identity and access management service, which helps your employees and applications sign in and access various resources. It will centralize the management of users and permissions for the different services of the solution.

Azure Monitor

It offers a comprehensive solution to collect, analyze and act on telemetry from your on-premises and cloud environments. It will allow to obtain, analyze and report on the status of each of the services that make up the solution.

Azure Key Vault

Service to store and access secrets securely, such as API keys, passwords, certificates or cryptographic keys. It will be the single repository of system keys.

Azure Purview

Unified data governance solution that helps manage and govern your data. It will be the task of this service to collect and allow the governance of data, knowing its classification and lineage.
