

Azure Governance and Security Workshop

Cloud governance and security is an integral part of a cloud environment. Cloud governance is a set of rules and protocols that enhance data security and helps to manage risks to ensure smooth functioning in a cloud environment.

Gold Cloud Platform
Gold Cloud Productivity
Gold Security

Cloud governance is a set of practices that help ensure users operate in the cloud in ways that they want, that the operations are efficient, and that the user can monitor and correct operations as needed.

CHALLENGES

Cloud customers who has not implemented a governance strategy face resource usage, cost, access issues and data privacy challenges
