Mainframe Data Democratization Assessment

Harness mainframe data to drive business insights

Does your organization run critical applications on mainframes? Join Kyndryl for a two-day workshop on mainframe democratization and get ready to transform your mainframe data into business intelligence and insights. Let's co-create a strategy and roadmap to unlock your mainframe data and make it more accessible across your organization.

Modernize for better experiences

By 2024, the majority of legacy applications will receive some modernization investment, with cloud services used by 65% of the applications to extend functionality or replace inefficient code

WHAT WE OFFER

This workshop is facilitated by a team of Kyndryl business and technology experts to help you realize the business value of mainframe data democratization. What opportunities could you create by unlocking mainframe data silos? Data could be processed for insights in analytics, machine learning and AI applications, or be integrated into low-code and no-code tools to develop new software applications.

Come prepared to conceptualize the possibilities for your organization!

In this face-to-face workshop, you will:

1. Identify your business priorities
2. Create a technology framework to unlock your mainframe data
3. Prioritize projects that drive value for your business
4. View a demonstration of mainframe data visualization and insights capabilities

The workshop will also provide an expert analysis of your business priorities, a high-level plan, and a proof-of-concept proposal designed to deliver immediate usable value.

kyndryl.

At Kyndryl, we leverage our mainframe expertise to help customers unlock and harness mainframe data to deliver business intelligence and insights at scale. Our data and AI advisory services are designed to transform and modernize your legacy systems with the right data foundation and platform to enable reliable, modular and scalable data-driven solutions that improve decision-making and move your business forward.
