

Azure App Design and Development Assessment

About App Design and Development Assessment

Before you start building an application on the Azure platform, you must perform an Azure App Design and Development Assessment. The assessment is a technical evaluation of how your application will perform on Microsoft's cloud platform.

It helps you see if your app has potential issues, as well as any potential security risks. This assessment can also help you avoid any surprises when it comes time for deployment.

Let a team of experts help you get started on the right foot by performing an assessment of your current app design and development capabilities.

We'll assess

Design and Development Process

How far along in the Design and Development process your company is with any existing apps or new projects. We'll provide a list of potential issues that we've seen in other companies' apps when they were in a similar position as yours.

Time to Achieve Full Competency in Designing and Developing Apps on Azure

How long it will take for your team to achieve full competency in designing and developing apps on Azure (including the time needed for training). We'll also suggest some resources or courses that can help fill any gaps in knowledge or skills.

Let's build better solutions together!
