

Azure Cost-Optimization Assessment

About Cost-Optimization Assessment

If you're looking for a way to reduce the costs of your Azure deployment, we're the right team for you.

We have a dedicated team at Langate that specializes in performing Azure cost-optimization assessments, which allows us to walk through your current setup and determine ways to save you money.

We perform a 3-day plan for cost optimization

Our 3-day plan for cost optimization will quickly identify areas where you can make changes that will reduce your monthly bill. We'll also provide recommendations on what changes would be best for your specific needs, so there's no need to worry about any unexpected expenses!

The Cost-Optimization Assessment Process

- Day 1** Identify what services are currently being used and how they are being used, by looking at usage reports and speaking to IT managers. Determine whether or not they are being used in an optimal manner.
- Day 2** Create a plan for optimizing your costs:

 - Removing unused subscriptions and licenses;
 - Reducing consumption of high-cost resources such as storage;
 - Migrating workloads to lower-cost regions if applicable.
- Day 3** Implementation! Check if there are any changes that require downtime (such as migrating workloads), and schedule any downtowns during off-hours so that users don't notice any disruptions in service availability due to migrations/upgrades.

Let's build better solutions together!
