Societal challenges for vulnerable populations

Migration, foster care, unemployment, pregnancy care .... Care for vulnerable populations often requires to look broader than the individual condition they are encountering.

To counter the rising costs caused by vulnerabilities, cities, municipalities, non-profits and care actors should work in a coordinated manner to help people out of a vulnerable situation.

CHALLENGES

It is both for central administrations and individual care workers hard to keep track of what actions can be done, and who can be referred to, across the different psycho-social and societal challenges for vulnerable people,
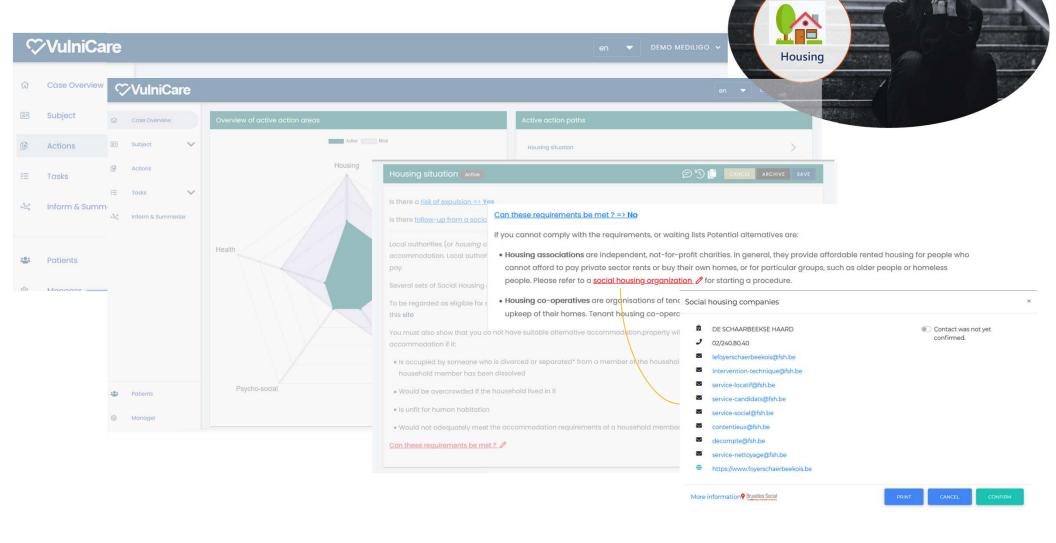

IDEAL SOLUTION

Ideally, everybody involved in support for vulnerable people, knows everything and everybody that can help them. All this across different aspects of psycho-social and societal care and tuned to the specific circumstances of each individual vulnerable person or situation.

DESIRED OUTCOMES

Coordinating care for vulnerable people increases their chances to actively participate in society again.

Actionable guidance ensures that investments made in pyscho-social support actions reach the right people and have a maximum effect and impact.

VulniCare Collaboration Tool
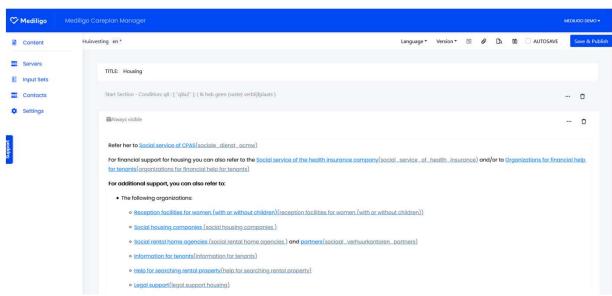

Add new action paths, broaden the knowledge base….

Template-driven: adapt to new actions, organizations, …

Reusable & future-proof platform

Configuration, no development

Add knowledge, procedures, best practices as you go

(training included, maintainable by non-technical people)

Vunicare

Equip care workers with concrete guidance and information, all in the context of a **proven contact & case management platform.**

1 **Actionable guidance**

Assess a vulnerable situation, give paths for solutions and connect the individual with the right people and organizations.

2 **Collaborate**

Always have a consistent view of each individual vulnerable situation. Let multiple care actors collaborate on a single source of information.

3 **Secure and Extensible**

VulniCare builds on the Azure-provided security and flexibility. Our API-first approach, allows to extend the solution, and integrate it with Microsoft FHIR API and Dynamics 365 Customer service

LeapStation "VulniCare"

Azure Cloud-native platform for helping caregivers to support vulnerable populations.

Vulnicare augments this with personalized actionable guidance paths and targeted referrals.

Actionable Collaboration

Dynamics 365 brings contact and case management. Vulnicare adds an **actionable knowledge base**, connects people and fosters **collaboration**.

Reusable & Future-proof

Add knowledge, procedures, best practices as you go:

It is all **configuration**, no development

Connectable by Default

Integrates with many other Microsoft components, such as the FHIR API, Dynamics365 and PowerBI to provide rich functionality and process support.
