leapwork
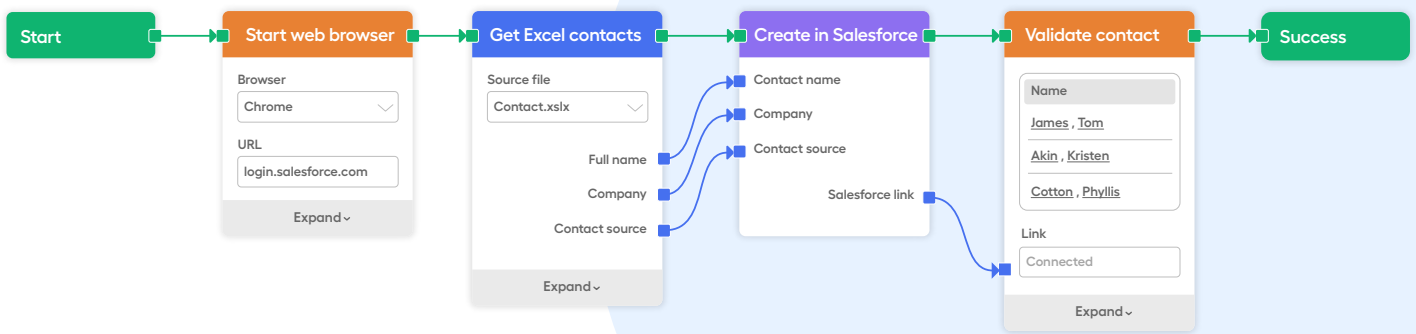

Test Automation made for Enterprises ✅

Test automation that's faster, easier, and scales across your entire team and tech stack. Built for enterprises, designed for QA teams.

A beautifully simple way to automate complex tests

A universal, visual automation language that the entire organization can use and understand.

From business users to QA teams, there are people across your organization who know precisely what processes to test. But, they don't necessarily have the technical or coding expertise traditionally required to automate them.

Automation in action

What can you do with Leapwork?

End-to-end testing across complex IT environments

Continuous testing with plugins to existing CI/CD pipelines

Validate SaaS and packaged application updates and customizations

Regression and functional UI testing

Start-of-day checks for business-critical processes

Simply show Leapwork what to automate and watch the platform express the process in a visual way. Our intelligent building blocks indicate every step in a process and handle complex logic and data transformations in the background.

Consciously cross-functional

Leapwork functions across a range of technologies - we've got you covered.

### From complex automation to straightforward testing

We run on a powerful technology stack that enables the platform to work seamlessly across your organization's application portfolio.

Use the same visual approach to automate anything. From desktop-based systems, mainframes, and ERP software that serve your back-office to web platforms, Commercial off-the-shelf software, mobile web apps, and virtual desktops such as Citrix.

Automate testing for every step across your entire enterprise from one, unified place.

And yes, we're compatible with the apps and software you already use.

Maintenance made easy

Reuse components, reduce workload

Don't start from scratch every time. Turn common steps into reusable sub-flows. The result? Less maintenance. Few development bottlenecks. Much happier teams.

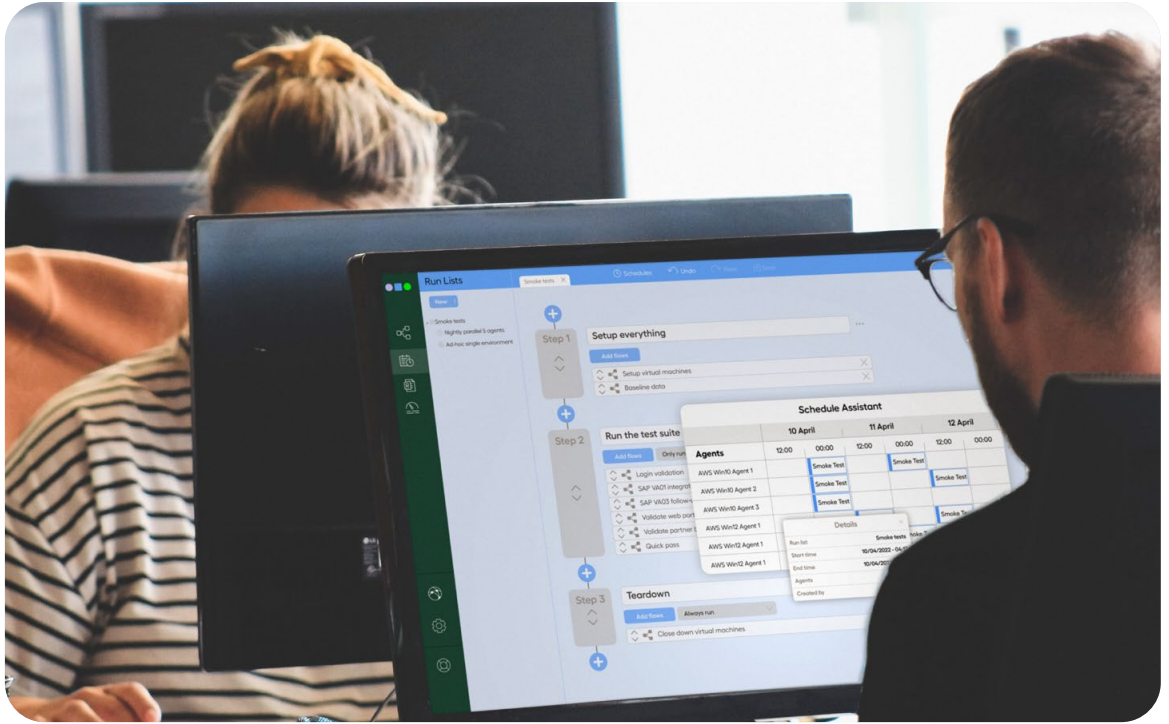

Hypervisual debugging

Struggling to find why a test failed? Quickly find the what and the why in three ways: video recording, data-level insights, and activity logs.

Everything you expect and more

A range of tools and assets to facilitate rapid enterprise-wide adoption for faster results.

✅ All the plug-ins you need. Ready to go.

We use REST API. It makes us compatible with the most common DevOps tools and orchestrators you already use in your CI/CD pipeline.
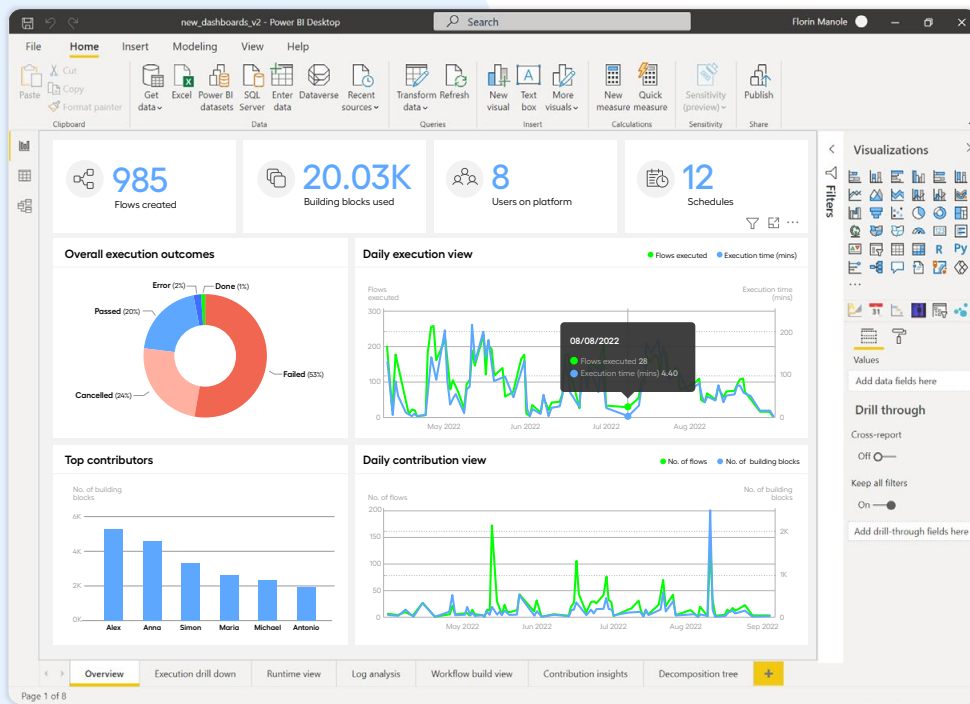

✅ Always compliant

Designed for enterprises with extended regulatory requirements or internal compliance standards. Get tamper-proof audit logs and absolute version control. Guarantee that automation approved in a specific context remains unchanged.

✅ Easily access powerful data

Give the green light to easy data access. Fetch data from wherever you need. Web services. Spreadsheets. Databases. All integrated into your tests.

✅ Run tests in parallel

Automation in multiple environments? We've got you. All at once? No problem. Run tests in parallel using Selenium Grid, along with cloud providers, such as BrowserStack and Sauce Labs.

✅ Schedule tests

Schedule which flows to run, and when. On-demand, in intervals, or at one time. All in one place.

✅ Workflow management

See what's ready to go, and what's in review and draft mode. Made a change that didn't go to plan? You can track changes and roll them back with version control.

✅ Team Management

Unlocking knowledge across teams just got easier. Control who has access to what. With Team Management, easily give and revoke access to projects without damaging tests in the process.

✅ Reporting

We integrate with Power BI and Tableau, so you can make sense of data. The full picture. In one view.

✅ Sure as sure can be

All your automation data is encrypted to the highest industry standards. Every. Last. Byte.

Supporting your every move

No matter where you are in your journey. Our QA and automation experts will lend you a helping hand. Anytime. Anywhere.

Our world-class support includes

On-demand technical chat with automation specialists

A dedicated Customer Success Manager

Quarterly Business Reviews to support a value-driven approach

Access to the Leapwork learning center, knowledgebase and library of video tutorials

With a 95% CSAT score, let the numbers do the talking

"Our regression suite is expanding daily, with hundreds of automated tests already. Nothing seems to be out of reach with the extremely tenacious and capable support team".
