Sales overview

Course authoring is the L&D bottleneck.

Most teams have the content but lack the time, tools and people to turn it into engaging courses. The result: training backlogs, slow rollouts and uneven learner experiences.

Slow time-to-launch

New courses can take months — long after the business need has moved on.

Costly production

Instructional designers, writers and multimedia teams add real headcount cost per course.

Inconsistent experience

Without templates and guardrails, courses vary in quality, structure and brand.

Hard to update

Refreshing content is painful, so courses age — and learners lose trust.

Meet CourzBuilder.

An AI-powered authoring studio that turns your existing documents, links and prompts into polished, interactive, SCORM-ready courses — without instructional design overhead. Domain experts publish; L&D leaders stay in control of brand, quality and rollout.

AI-first authoring

Generate outlines, lessons, slides, narration and quizzes from your source material.

Rich, interactive

Video, flashcards, scenarios, code, callouts — beyond static slide decks and text.

Deploy anywhere

SCORM 1.2 / 2004 export means courses move with you, into any LMS you use today.

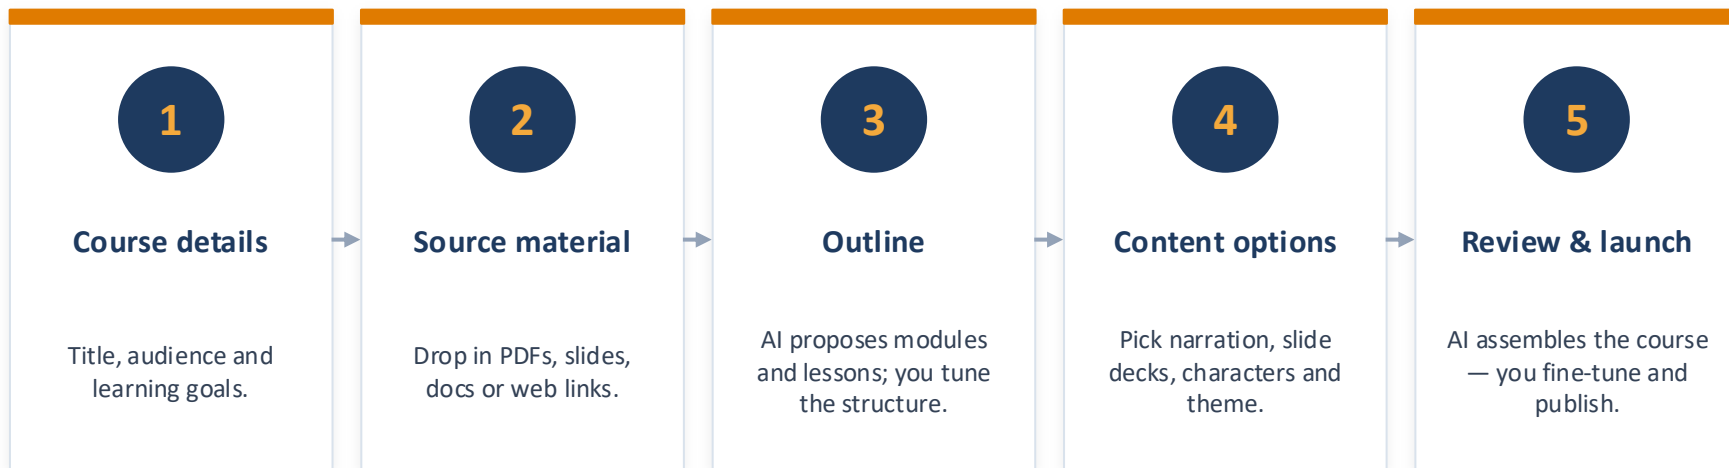

WHAT YOU GET

One studio.
One content library.
Every learner reached.

- 1 L&D leaders** shorter cycles, on-brand at scale
- 2 Authors** AI handles the heavy lifting
- 3 Learners** engaging, multi-format lessons

Five steps from source to course.

Authors don't start from a blank page. The wizard guides them through five short steps and produces a complete first draft — outline, lessons, slides, narration and quizzes — ready to refine.

Use the AI draft as-is, or edit any block in the live lesson canvas.

Rich, interactive content blocks.

Lessons are built from drag-and-drop blocks — far beyond text and slides. Authors mix interactivity, video and assessment to match how each topic is best learned.

1 Slide decks

AI-generated, animated decks with narration and characters.

2 Video lessons

Embed or upload, with progress tracking and transcripts.

3 Quizzes

MCQs, true/false, fill-in-blank, matching and ordering.

4 Flashcards

Spaced-repetition cards for retention of key concepts.

5 Scenarios

Branching decision flows for soft-skills and judgement training.

6 Rich text

Headings, callouts, accordions, code and downloadable files.

All blocks are editable in a live, drag-and-drop canvas — no separate authoring tools to learn.

Brand, voice and language — built in.

Courses don't just need to be built — they need to feel on-brand, sound natural, and reach every learner in their language. CourzBuilder packages all three.

BRANDING

On-brand themes

- Drop a logo or URL — AI derives a color palette
- Workspace-wide themes apply to every new course
- 20+ presets if you'd rather start from a template

VOICE

Natural AI narration

- Add high-quality voice-over to slides and lessons
- Voice-cloning to match an in-house presenter
- Built-in character library for guided narration

LANGUAGE

Reach every learner

- AI-translate full courses into target languages
- Lesson text, narration prompts and quizzes — all in one pass
- Captions and alt text generated for accessibility

SCORM-ready. Every LMS. Every cohort.

You shouldn't have to switch your LMS to upgrade your authoring. CourzBuilder publishes courses your existing LMS already understands — and tracks the data your auditors expect.

SCORM 1.2 & 2004 export

One-click packages that import into any modern LMS.

Direct publish to IgniteNX

Skip the upload step when you're already on IgniteNX.

Completion & scores

Quiz scores, time-on-course and completion tracked back into the LMS.

Mobile-friendly playback

Lightweight, responsive learner experience on desktop, tablet and phone.

WORKS WITH

Your LMS, today.

If your LMS supports SCORM, it supports CourzBuilder. Familiar names — IgniteNX, and the major commercial and open-source LMSs you already evaluate.

No rip-and-replace required.

Govern, share and scale safely.

Workspaces & roles

Owner, contributor and viewer roles keep authoring tidy as your team grows.

Shared asset library

Reuse images, videos, characters and themes across every course.

Brand-safe by default

Workspace branding keeps every course on-brand without manual policing.

Usage at a glance

Dashboards show AI usage, narration minutes and seat consumption per plan.

Versioning & drafts

Iterate freely; promote drafts to published when reviewers sign off.

No instructional designer required

Domain experts ship courses themselves — without losing structure or polish.

Everything in CourzBuilder, on one page.

A single reference view of what authors, learners and L&D leaders get out of the box.

AUTHORING

Build courses fast

- ✓ AI authoring wizard (5-step)
- ✓ Drag-and-drop block editor
- ✓ Live lesson canvas
- ✓ Drafts & versioning
- ✓ Modules, lessons, outlines

CONTENT

Mix the right blocks

- ✓ AI-generated slide decks
- ✓ Video lessons w/ tracking
- ✓ Quizzes (5+ question types)
- ✓ Flashcards for retention
- ✓ Branching scenarios

AI POWER

Smart out of the box

- ✓ Auto-generate outlines
- ✓ Generate lessons & quizzes
- ✓ AI image generation
- ✓ Voice narration & cloning
- ✓ Multi-language translation

DELIVER & SCALE

Ship and govern

- ✓ SCORM 1.2 / 2004 export
- ✓ Direct publish to IgniteNX
- ✓ Mobile-friendly playback
- ✓ Workspaces & roles
- ✓ Shared asset library

Plus accessibility (captions + alt text), drafts, dashboards, and ongoing AI improvements.

LET'S TALK

Ship your first course in 30 days.

We'll set up CourzBuilder for your team, co-build your first course from material you already have, and walk you through publishing it into the LMS your learners use today.

1

Discovery

30-min call to align on audience, content sources and goals.

2

Co-build

We build a real course with you using AI authoring.

3

Go-live

Publish to your LMS and roll out to your first cohort.
