

SAP to the Cloud Migration Assessment

If you are considering migrating SAP to a hyperscaler Cloud, your business must make a fully informed decision about the best way forward, especially when migrating these mission-critical workloads.

How We Can Help

Lemongrass can help you by engaging with your technical team to better understand your current landscape, challenges, and business goals. Our team will work with you to look at things such as product versions, current configurations, and layout to assess what your requirements are. We can advise you on how to layer the architecture in such a way that it can be agile, demonstrate how to adopt automation to do things more quickly, and for upgrades, we can recommend the best and latest product versions.

We also evaluate the target environment you want to set up and consider whether your organization should move to SAP S/4HANA, or if there is a business requirement to upgrade or decommission systems.

We identify any key risks in the migration, determine how best to mitigate them, and most importantly, we identify what benefits you are looking to achieve, and how to achieve them.

How We Do It

We do this through a series of interviews with your IT team. We then analyze the data and other information collected and produce a detailed report in five business days. The report incorporates key data needed for you to make an informed decision about migrating to the Cloud including:

- All identified risks and mitigations
- A detailed target architecture
- A migration plan including the cost
- An estimated annual run cost of your landscape on the Cloud

Optional Proof of Concept

We also offer a Proof of Concept if you're interested in seeing some of your organization's own systems running in a public Cloud environment. In our Proof of Concept, we can demonstrate the improved performance of your systems and illustrate how best to mitigate any of the risks identified in the Migration Assessment.

About Lemongrass

Lemongrass is a software-enabled services provider, synonymous with SAP on Cloud, focused on delivering superior, highly automated Managed Services to Enterprise customers. Our customers span multiple verticals and geographies across the Americas, EMEA and APAC.
