

COSMOTE Azure Site Recovery

Disaster Recovery is all about Application Availability

COSMOTE empowers Customers at every stage of their Digital Transformation journey. COSMOTE, through its strategic partnership with Microsoft, helps businesses to accelerate their digital transformation and enhance their productivity securely.

Azure Site Recovery Overview

- **Azure Site Recovery** is a disaster recovery solution that provides protection for your virtual machines and applications. **ASR replicates your workloads to a secondary site, and in the event of an outage or disaster, you can failover to the secondary site and resume operations with minimal downtime.**
- ASR is ideal for organizations that need **high availability** and **business continuity** for their mission-critical applications. **It supports both on-premises and cloud-based workloads** and provides continuous data protection with replication frequencies as low as 30 seconds.
- ASR also offers automated recovery testing and failover, ensuring that your disaster recovery plan is tested and validated regularly

**Ensure Business Continuity
with Azure Site Recovery**
