CLOUD MIGRATION SERVICES

Leobit

Achieve technical and financial flexibility,efficiencies, and capabilities on the cloud that aren't possible with on-premises IT infrastructure.
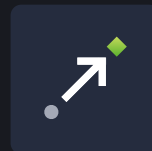

Step 1

Assessment of the current solution

This phase is to examine the resources of your company and its IT environment, determine the project needs, its challenges, current or future integration, and places for future expansion

Step 2

Design and optimization

At this stage, Leobit experts build a migration roadmap from existing infrastructure to Azure Cloud, using the essential services of Azure, Functions, storage, etc. We select the necessary combination of services to ensure the most effective management, cost efficiency benefits, future scaling, and business process optimization

Step 3

Support and consulting

After the migration completion, it is important to consider possible changes to critical infrastructure and predict workload contentions, provide recommendations for future decisions and approaches that will meet the standards of built decision
