Law firms want to enhance their client's experience, manage costs effectively, increase productivity and drive profit

Client expectations are more demanding than ever and competition for work is fuelled in the B2B space, this results in firms having to provide high levels of service on tighter margins. It is no longer enough to simply have technology, it must be the right solution aligned to the right requirements, meeting the business aspiration.

CHALLENGES

Too many disparate systems scattered around your organisation, too much manual processing and administration increasing cost of services and burden on busy lawyers. IT systems which dictate how you work, rather than supporting how you *want* to work, it's time for something better.

IDEAL SOLUTION

Manage your cases from end-to-end, reviewing its status, key tasks, work allocation, risks, profitability, and case documentation from a single perspective. See key insights for your legal work and your team, such as billable / unbilled hours. What's more – with flexible interfaces, users can work in a way that suits them.

DESIRED OUTCOMES

Empower Partners to view daily workloads and manage work allocation immediately, enable Managing Partners to make faster and smarter decisions from one source of truth, and take advantage of seamless collaboration and communication on projects and cases within your teams.
