

SOLUTIONS TO MANAGE RISING RISK POPULATIONS

Lightbeam's proven population health management platform and process enables you to identify strategic objectives, creating specific interventions backed by data to increase operational workflows that match established benchmarks, even as those objectives evolve.

Focusing on the highest-risk, highest-cost patients is a tried-and-true method for succeeding in value-based care. But what about 1 in 5 patients at risk of becoming high cost each year?

Together with CareSignal, Lightbeam Health Solutions is helping healthcare organizations mitigate future risk and transform care delivery. During the RISE Risk Adjustment Forum, our team would love to demonstrate how our solutions:

- Intelligently identify rising risk populations
- Uncover hidden risk adjustment opportunities with AI
- Increase patient reach by 10x without the need for additional staff
- Generate over \$2.25 billion in value-based care savings since 2014
- Reduce avoidable readmissions by 15%

Lightbeam's Solutions Are Designed To Position Organizations To Thrive By:

Providing Real-Time Views Into Savings/Loss Projections

Identifying Opportunities to Improve Quality and Utilization

Grouping Patients By Cohort with Automated Workflows

Providing Expert Advisory and Staffing to Fill Gaps
