

Bring **All Your AI and Analytics Experiences Together**

with **Lingaro and Microsoft**

The advancements and innovations in the field of data, AI, analytics, and databases have resulted in a high complexity of data architectures, fragmentation of data due to the increase in the volume of data stored in various systems and the need of multiple products that require extensive integration and multiple teams and skills to manage them.

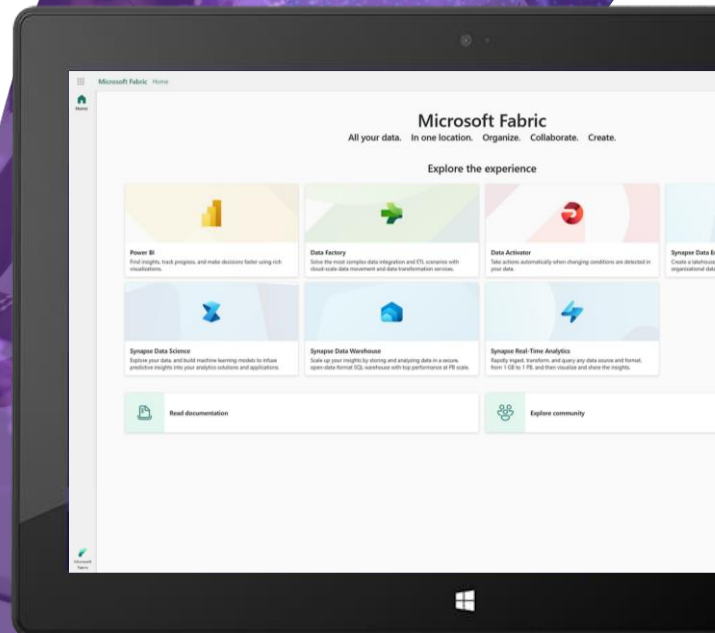

To simplify and unify the data ecosystem it is necessary to provide an integrated e2e solution for enterprises that covers everything from data movement to data science, Real-Time Analytics, and business intelligence. This is Microsoft Fabric.

Microsoft Fabric allows you to manage your data in a single, AI-powered analytics platform that helps teams turn data into a competitive advantage

Fabric brings together experiences such as Data Engineering, Data Factory, Data Science, Data Warehouse, Real-Time Analytics, and Power BI onto a shared SaaS foundation which takes simplicity and integration to a whole new level.

To learn more, request a free overview of Microsoft Fabric

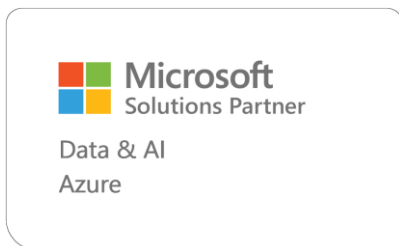

All Your Data.
All Your Teams.
All In One Place.

While Fabric is still in public purview it is now the right time to get familiar with the possibilities and benefits that this integrated data and analytics platform can offer

Lingaro has the experience to get your company started with Microsoft Fabric and evaluate the benefits of this all-in-one analytics solution

Leveraging Microsoft Fabric, Lingaro guides organizations on how to unify and simplify their data estate, manage powerful AI models, make data more accessible to business users and create a single control point to govern all your data

Govern
data across
your organization

Empower
everyone in your business

Manage
powerful AI models

Unify
your data estate
