

The background of the left side of the slide features a blurred image of a workspace. In the foreground, there is a stack of books, with the top one having 'DALIO' visible on its spine. Behind the books is a laptop, and further back, a green plant is visible. A semi-transparent dark blue rectangle is overlaid on the left side, containing the main text.

# Build and deploy **your** own custom applications

Take your ideas from  
concept to working POC  
in just **4 weeks**.

We help you build your own **custom applications** in order to efficiently manage your business workflow on the go.

From timesheet applications and out-of-office notifiers to Team Hubs that help your employees manage multiple aspects of their day-to-day logistics, we take applications from concept to a working model in **4 weeks**.

Take part in the development process and create an app suited to your needs:

- **Design** - Work alongside our Power Platform Architects in order to establish the best ways of adapting the Power Platform ecosystem to your needs, and the most efficient ways of integrating your existing applications with the new apps.
- **Development** - Take part in our development process and start your journey using the Power Platform ecosystem.
- **Implementation and training** - After the application is ready we'll put it to the test with your production environment, and host training sessions with your team, ensuring everybody is comfortable using the new tools at their disposal.

Prices vary based on application complexity. Contact us for a quotation.

# Program Stages

1

## Design

In the first week of the program we focus on outlining the application features and design characteristics.

This is done in collaboration with the key stakeholders and application end users.

Audit of integration possibilities with legacy business apps is also done in this phase.

2

## Development

The next two weeks are focused on the development of your future low code application. We make sure to include your team in every development decision that may arise.

3

## Training

In the last week we put everything together, and enter the UAT and bug fixing stages. If everything is successful we deploy the final solution into production.

On the last day we will host a workshop in which we will go over the full functionality with the end-users.
