## Transport your business into the future

**LiveTiles Quantum** is the space-age tool kit you need for powerful business insights.

Quantum's modules are driven by artificial intelligence, giving you the power to optimize your digital workplace by connecting data from multiple applications.

Drive your entire workplace experience by data, context, and user behaviour, intelligent employee profiling, and business modelling. Provide automation and support to facilitate daily routines and increase productivity.

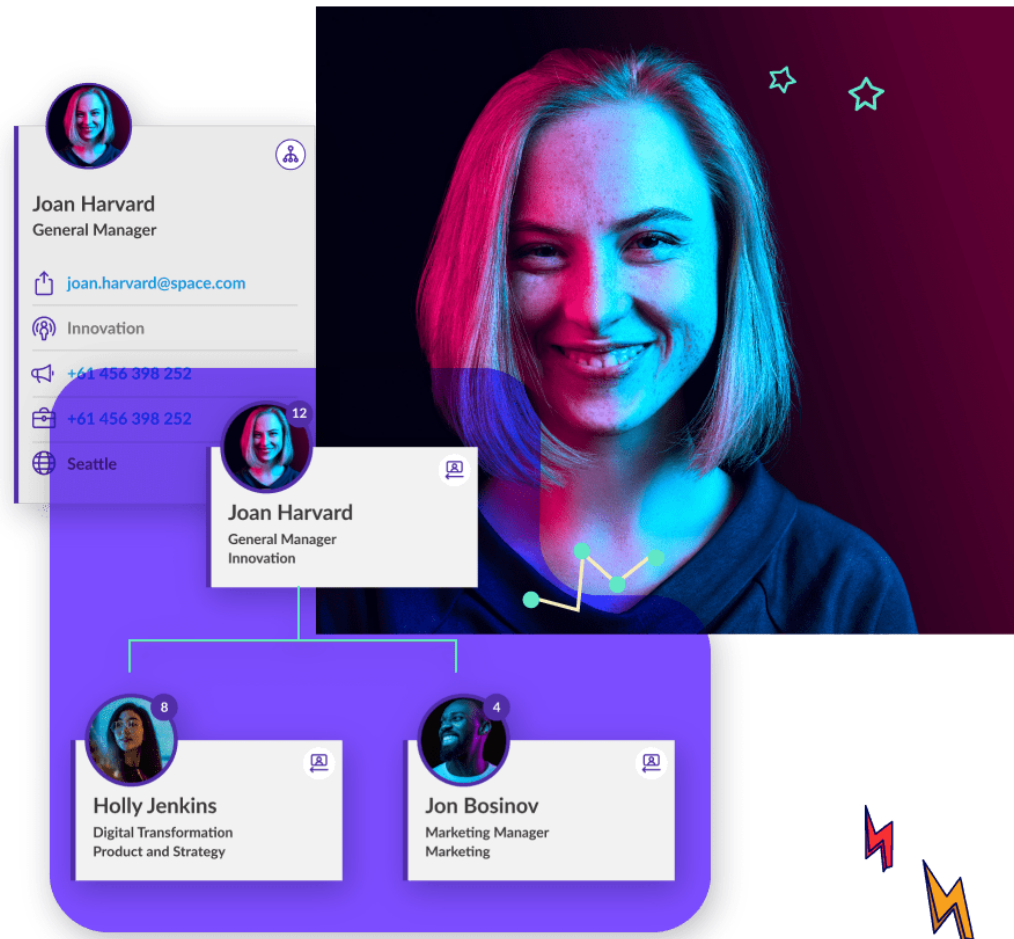

Get actionable insights into how your solutions are being used and make data-driven decisions to improve user experiences and content.

## Directory - a high-tech who's who

Finding staff details shouldn't be an epic mission into the unknown. Using AI technology, Directory identifies what's missing or wrong in your staff directory, and lets you know via non-annoying emails or chat bots.

## Bring your directory to life

LiveTiles Directory brings your company directory to life by ensuring profile information is always complete and up-to-date. It understands what's missing or incorrect, and automatically starts a conversation with employees to collect and validate their information. It improves IT service delivery, employee engagement and unlocks opportunities for greater personalization

## See how our Employee Directory Assistant can improve the employee experience in your organisation.

The directory searches employee profiles—directly from the information's source, not from an out of date search index.

The screenshot displays the LiveTiles Quantum Employee Directory Assistant interface. At the top, there is a search bar labeled "Search your directory" with a magnifying glass icon. Below the search bar, there is a "Filter by:" section with several dropdown menus: "Department", "Office Location", "State", "Country", "Last Name", and "City". A blue "Filter" button is located to the right of these filters. Below the filters, the search results are displayed for the query "Eddie". The results are shown as a list of five employee profiles, each with a circular profile picture, name, title, and contact information. The filters "Department: Engineering" and "Country: United States" are applied to the search results.

# Advanced filtering

Directory allows employees to apply multiple filters to quickly find the right people.

## Advanced configuration

The employee profile cards can be configured to display the most important information, right where people want it.

Past Projects  
**SAS 70 Type II audit, Business Continuity / Disaster Recovery strategy**

Skills  
**Enterprise Software, Cloud Computing, Enterprise Architecture, Disaster Recovery**

Close

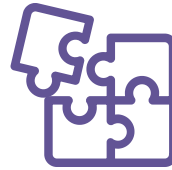

## Classic and Modern

The web part works in both classic and modern SharePoint pages and LiveTiles Page Designer.

## All in one place

Through our Integration Framework, you can connect all your systems where employee information lives, including your HRIS.

## Employee engagement

The directory software enables employees to quickly find and learn about colleagues.

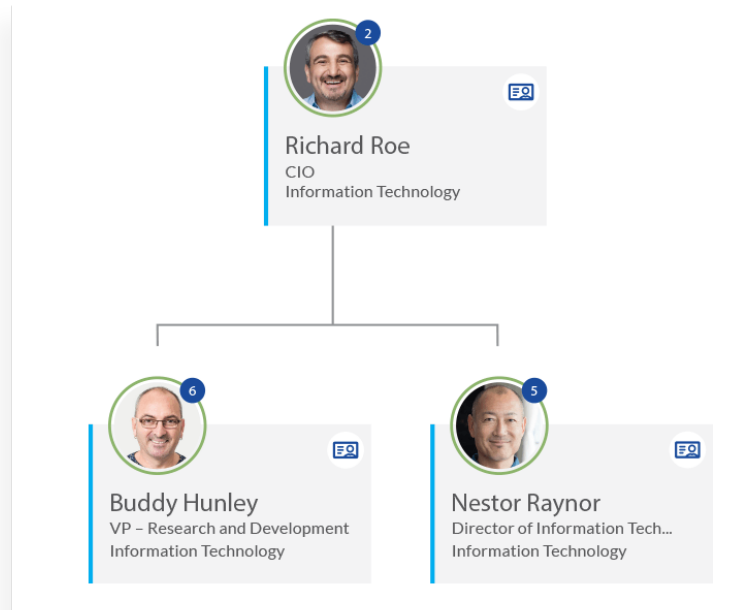

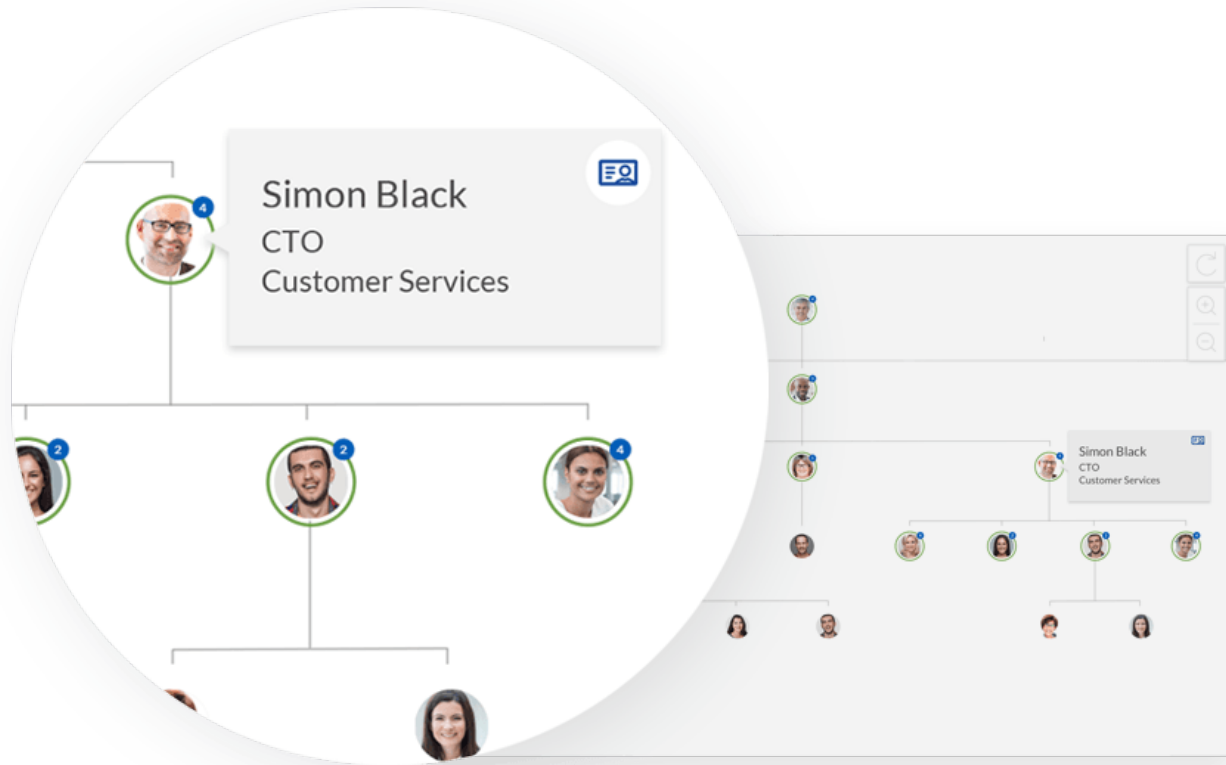

## Automated org chart

The LiveTiles platform has an integrated org chart builder and web part that provides everyone in your company visibility into all the divisions, teams and people, and makes it simple to learn and collaborate across the entire organization.

The org chart makes it simple to find where an employee sits in the company and learn about their skills and contact details.

## Org Chart – LiveTiles

The org chart builder is supported by our AI & Bot technology, ensuring that information is complete and up-to-date without manual entry required.

## Org Chart – LiveTiles

The org chart builder can be configured to show different profile information, zoom settings and display options.

The image shows two overlapping configuration panels for the Org Chart builder. The left panel, titled "Chart Options", includes a "Root User" field with a search box containing "Richard Roe" and a close button. Below it, a note states "This user will be used as the top of the chart". The "Chart Height" is set to "1000" with a sub-label "Height specified in px". Under "Render Users As", the "Auto (Card or Photo based on z)" option is selected. The "Hide Zoom Controls" toggle is currently "Off". The right panel, titled "Card Options", features an "Attributes (Empty for Default)" dropdown menu showing "Display Name, City, Job Title, Work Pho...". Below this is an "Attributes Order" list with four items: "Display Name", "City", "Job Title", and "Work Phone", each with up and down arrow controls. An "Accent Color" section shows a blue color bar and a color picker icon. At the bottom of the right panel are expandable sections for "Detail Modal Options" and "Advanced Options".
