

App Innovation / App Modernisation Assessment

What is the value?

Modernising your legacy apps by moving them into Azure allows you to not only improve performance and value, but to also drive innovation. Whether you're looking to simply lower infrastructure costs, or to go further and future-proof your organisation by delivering intelligent app experiences, faster times to market, and more, determining your best path forward is key. Our expert assessment is a structured process, designed to help you better understand where you are, where you want to go, and how to get there.

Deliverables

- ▶ A list of best practices
- ▶ Documented OKRs
- ▶ Documented assessment of your current environment
- ▶ A prioritized list of recommended improvements and innovations
- ▶ A roadmap that will enable you to accelerate your innovation journey with confidence

How does it work?

Every innovation journey is unique, which is why following a best practices presentation, we take the time to understand and define your business objectives and key requirements (OKRs). Next, we move to the assessment phase, taking stock of your existing capabilities and current environment. This allows us to get a better view of your current situation. Lastly, we deliver a modernisation roadmap to take you where you want to be. This includes a prioritised list of recommended improvements and innovations.get there.

Whether your app is big or small, BDO Lixar can help your organisation:

- Migrate to PaaS infrastructure
- Re-architect for a more scalable solution
- Redevelop to take advantage of containerisation or serverless computing
- Move from monolith to microservices
- Improve load balancing and resilience
- Instantiate or mature Azure DevOps CI/CD pipelines
