

SmartMine

4 Weeks PoC Consulting Offer

SmartMine is a data maturity and analytics acceleration platform driven from our decades of experience in supporting the mine analytics needs of our clients located all over the World. It is an analytics accelerator born from mine operations, for mine operations, that advances the data maturity and operational insights of miners.

What is the value?

The SmartMine Proof-of-Concept (PoC) is a pilot analytics project designed specifically with the industry focus of Mining and Natural Resource. The end-to-end Modern Data Platform, SmartMine leverages the full power of the Azure suite of services including Synapse, Purview, and Power BI. The PoC is designed to show you how your most valuable resource — your data — can be turned into meaningful, interactive insights, in just a matter of weeks.

How does it work?

SmartMine contains ready-made connectors to accelerate connecting to most of the common Mine Operations, Plant Operations, Health & Safety, HR, and Finance systems found in the mining industry. It consists of a mining operations data model that provides a 360 degree view of the operations contained within a flexible data lake repository. Insights are delivered through a collection of Operational Reporting, Management

Deliverables

- ▶ Accelerated Technical Analysis & Advisory
- ▶ SmartMine azure services deployed in Modern, Cloud-Based Architecture
- ▶ Industry Specific Power BI Data Visualization Dashboard
- ▶ Presentation for Phase 2 Roadmap

Reporting, and Executive Dashboards powered by Power BI. A library of predictive analytics models has been assembled to support predictive maintenance, plant optimization, recovery optimization, and proactive safety management scenarios. In addition, SmartMine embraces the principles of Industry 4.0 in establishing a framework for creating digital twins and simulation models.
