How we do it

Problem → Solution

[PROBLEM] 90% of enterprise data is trapped in unstructured documents. Yet, document handling remains highly manual—relying on legacy models that struggle to understand complex documents and brittle rule-based automation that breaks under complexity.

[SOLUTION] LlamaIndex is the agentic AI platform for automating knowledge work with document-centric workflows. It combines enterprise-grade document parsing and extraction with a trusted framework for building intelligent agents that reason over documents, adapt to business logic, and scale to production.

LEVERAGE AGENTIC WORKFLOWS FOR:

- Invoice processing
- RFP generation
- Financial due diligence
- Insurance underwriting
- Technical documentation search

...and so much more...

Case Studies

TECHNICAL DOCUMENTATION WORKFLOW

Customer

Use cases

Service Center Assistant, Health and Safety Assistant, Technical Datasheet Analysis.

Adoption

1k-3k+ users internally

Impact

Process a new data + agent pipeline from weeks to minutes.

75% faster information retrieval

45% reduction in design errors

FINANCIAL WORKFLOW AUTOMATION

Customer

CARLYLE
